FOREWORD

An oft-quoted Persian proverb says that “Musk is that which of itself yields a sweet smell, and not that which the perfumer calls such”. Even so Mr. Bendrey’s “A Study of the Epigraphia Indo-Moslemica” possesses such innate worth as to need no presentation by an usher. Only connoisseurs of musk can do justice to the excellence of its odour, so also serious students of Indian history of the post-Islamic period (especially of the Bombay Province and the Nizam’s Dominions) who are anxious to make the fullest use of the historical material contained in the six hundred Epigraphical Inscriptions published in the above Journal from 1907 to 1938 “in all its aspects and from all points of view”, or the curious student of the by-paths of Indian history, can relish the mental pabulum laid so tastefully by Mr. Bendrey on the quadrangular table of his “Study”.

A long-felt want for a reliable, comprehensive and well-equipped GUIDE, prepared on scientific lines and leading through labyrinthine shafts to the veritable mine of Epigraphical material treasured in the volumes of the Journal in question has now been supplied for the first time by Mr. Bendrey. For this signal service Mr. Bendrey deserves the heart-felt thanks of all co-workers in the field of historical research.

The Introductory part of the “Study” which is spread over twenty short sections, contains almost everything of importance that could be said on a scientific approach (at once practical, precise and perfect), to a thorough and methodical study of the epigraphical material. It not only explains the principles on which such an approach has been or should be based, but also contains his very valuable suggestions for the
future guidance of Research-workers in the field of Indian history. The sections on the 'Value and Importance of Epigraphical Inscriptions', as source-material for history, 'Dates and Dating' (which explains the various eras current in Muslim India, viz., the Hijri, the so-called Arabi or Suru San, the Ilahi, the Fasli,—North Indian, Bengali and Deccani—and the Julus, met with in these inscriptions), 'Transliteration and Translation', 'Names and Titles' and 'Indexes', will fully repay perusal.

The other part of the "Study", which may aptly be called the study proper, tabulates six hundred inscriptions recorded in the volumes of the Journal, from A.H. 482 (A.D. 1090) to A.H. 1270 (A.D. 1854) and gives the most essential particulars of each one of them (touching the tripartite inseparable accidents of every historical event, viz., period, place and person). Each entry gives the date of the inscription (with corresponding date according to the Christian era), the place to which it belongs, and the names of the persons referred to. It also gives a very brief summary of the contents of each inscription, refers to the volume of the Journal in which the article pertaining to the inscription is to be found and mentions the name of the contributor of it. This part bears ample testimony to the dogged perseverance, indefatigable industry and methodical work of Mr. Bendrey.

This part of the "Study" would have remained incomplete if it had not been followed by two Tables in the form of Appendices A and B, which contain the names of nineteen contributors, the number of individual contributions, the total number (105) of their contributions, and, what is *most valuable*, a full classification of the six hundred inscriptions arranged according to the centuries to which they belong, and the nature of the subject-matter, such as Religion, Military, Administrative and Cultural.

In short, the "Study" is presented in a most attractive form and is a credit to the author, the Department to which he belongs, and the country in which he was born.
FOREWORD

If to his various accomplishments, of which he has given ample proof in his half-a-dozen publications, English, Marathi and Sanskrit, he had added a linguistic acquaintance with these inscriptions, his labours would have been the more remarkable. All the same I wish him a complete success in all his literary undertakings and a long life and sufficient energy to enable him to acquire at least a working knowledge of Persian, which is the principal language of these inscriptions and the sweetest language of Asia.

Kashana-E-Haqq, Salisbury Park, Poona,

SHAikh ABDULKADIR SARFARAZ
24th Sep. 1944.
PREFACE

The present Study of the Muslim Inscriptions published in the Epigraphia Indo-Moslemica is the outcome of my preliminary studies pertaining to the history of the Deccan, some of which have already been published while others are in the course of preparation. Though mainly intended for my own use, the present study is likely to help other investigators working in this field. I have, therefore, thought it advisable to present it to the world of scholars to prevent duplication of effort on their part. It is hoped that this study will facilitate the work of brother-workers as it is designed to acquaint them with the principles and methods which need to be applied in the study of insessional material.

In the preparation of the present Volume, I am indebted to several friends, and I take this opportunity of thanking them most cordially. To Mr. P. K. Gode, whose readiness to help historical research is now well known to Indian scholars, I am particularly grateful as he has sacrificed much of his time in helping me to recast the original Study from the points of view of clarity and accuracy. I am also highly obliged to my friends Mr. S. L. Kapadi, Mr. R. P. Karwe, Dr. P. M. Joshi, Prof. S. R. Sharma and Prof. B. D. Verma for giving me all possible assistance in my work.

I also acknowledge, with thanks, the kind favour shown by the Secretary to the Government of India, Department of Education, in according me the necessary permission for the use of the insessional material published in the Epigraphia Indo-Moslemica.

Lastly, I have to express my heartfelt thanks to Mr. M. N. Kulkarni, the Proprietor of the Karnatak Publishing House, Bombay, for his readily undertaking to publish the present Volume. In spite of the scarcity of labour and paper, he has completed the publication of this work, though slightly delayed, with great care and excellence, which characterize all the publications of the Karnatak Publishing House.

Ganesh-chaturthi, 22nd August 1944.  V. S. BENDREY

A STUDY OF THE INSCRIPTIONS
PUBLISHED IN THE
EPIGRAPHIA INDO-MOSELMICA
[1907 TO 1938]

PART I

The varied and voluminous inscriptive material published in the *Epigraphia Indo-Moslemica* in the last thirty-seven years of its existence greatly needs co-ordination if its use in the reconstruction of our national history is to be practical, precise and complete. To set the historical and cultural material in the framework of time, place and person—the three chief elements of history—is to determine its comparative value, whether negative or positive, in relation to the time and events of the historic past. Thus even as a mere instrument of study of the material, a consolidation has certain apparent advantages; but its service, in this particular case, as an illustration for demonstrating the need for codification of methods and principles is, however, of much greater consequence and effect. Any guidance, having foundation on the experiences of the past, thus secured in the presentation of historical material should ensure greater utility, sufficiently unbiased evidence contained in the material and definite but true understanding of the times. It would facilitate research by directing its activity to a limited field and reduce the work of the research scholar to its minimum, thus affording us
soundly tested results of his valuable and laborious studies. Some sort of a general guide to research workers in any art or science is indisputable especially because it enables us to ascertain the common basis for their work and determines both the process and procedure of research with scientific preciseness.
RESEARCH AND ITS DIFFICULTIES

No authoritative works were ever produced or any scientific discoveries or inventions made, or any theories of any value or importance propounded without systematic and serious research. In the higher sense of the word, research signifies the investigations of those who devote themselves to the study of pure as opposed to applied sciences or to the investigation of causes rather than to practical experiments. Whatever may be the nature and scope of research, its aim is to add to our knowledge such facts as will prove of great help and direction in the sphere of our social and national life. In historical research, the purely scientific or descriptive studies covered by sociology were generally concentrated upon, but with the growth of the humanistic and historical point of view the philosophy of history is gaining firmer ground and is particularly responsible for the increasing appreciation of the influence wielded by history on our national life. While the scientific studies aim at elucidating factual sequence, the philosophy seeks to interpret the process (a) as the realization of the idea of freedom or rather as the reconciliation of individual freedom, and (b) as the play of cultured interests with the stable objectivity of law and abiding consciousness of the greater whole in which we move. Although the possibility of such a philosophy seems implied in the postulated unity of the world as a nation, many hold that it remains as yet an unachieved ideal. If, however, this philosophy is to perfect its constructive work, it must bring the course of human history within its survey, and exhibit the sequence of events as an evolution in which the purposive action of reason is traceable. Such a constructive survey of history adds considerably to the difficulties of the research worker.

In India, the problems of a research scholar with regard to his national history are more difficult, complicated and un-
defined. It is not merely the diversity of events or complex political upheavals that confront the research scholar, but he is also faced with difficulties pertaining to the field of his study and the market in which he has to dispose of his products as both these are by nature heterogeneous to his natural environments. Some of his main obstacles may be summarised below with a view to indicate their nature:

(a) The material for his study, even pertaining to the historical times, exists in languages not now spoken by him or understood commonly by the people.

(b) The field of his study comprises events and political influences extending over wider geographical areas with a variety of vernaculars and dialects.

(c) The official procedures, practices, etiquettes and conventions, as also the religious and social customs and tendencies, pertaining to the field of his study were not altogether the same as those obtaining at present.

(d) The means of identity of time, place and person, the three main factors of history, hidden behind some conventions, are yet to be discovered.

(e) The present public taste for history and its use is too narrow in its vision and outlook.

(f) The historiographers expect the research workers to present material through the medium which they know.

(g) The use of English as medium does not ensure sufficient accuracy either in translating the true picture of the times or in conveying the ideas associated with the material presented, the cultural foundation of the medium being dissimilar to that of the material.

For all these reasons, the need for an understanding between research scholars and historiographers is more and more emphasized. Such an understanding will not only recognize interdependence of the efforts of either, but, in recording past experiences, will have as its foremost aim the provision
of an unfaltering and ever dependable guide for future generations in spite of any future vicissitudes of circumstances and cultural atmosphere. What is intended is to ascertain how far the co-ordination of efforts on the part of researchers and historiographers is necessary for reaching this aim; and for this purpose, a critical study of the material recorded in the *Epigraphia Indo-Moslemica* will provide a suitable illustration in all respects. The main points to be determined in such a study are:

(a) the points of view of the researchers,
(b) the requirements of historiographers in their use of the material,
(c) the nature of the need for co-ordination, and
(d) the methods and principles with which such a co-ordination can be successfully attempted to ensure the interpretation of history as an ordered and purposive evolution of events.
HISTORICAL STUDY AND ITS STAGES

The expansion of the field of historical study and the growing public interest in Indian history have necessitated specialization. Each historian or research worker selects his own field and concentrates his efforts on an epoch, a personage or an event and by his thorough investigation brings them into historical relief to the best of his ability and resources; but the comprehensive historical surveys are generally effected through co-operative effort. These surveys cannot be said to have covered the entire field or represented anything but a mere fraction of the knowledge that has been unearthed, although they may be the essence of the specialized efforts made by individual scholars. They are incomplete, not for any want of ability or knowledge on the part of their authors, but on account of the limitations of space and study. Besides, new discoveries and revised interpretations have continued to be on the increase as the natural consequence of the ever growing facilities for study and the extension of the field of historical sources. Furthermore, the authors of these surveys are prone to the same human weaknesses and shortcomings as characterize individual scholars.

The interests of the age are generally reflected in its historical writings. Prior to the present scientific age, historical works were mainly devoted to politics with special emphasis on hero-worship. But in the modern democratic age the complex nature of society has become more evident and consequently the economic and sociological features of history have assumed greater importance than in the past. These interests are also receiving increasing prominence because of their immediate and practical influence on the modern life. Historical studies of national culture with special reference to commerce, industry, art and allied subjects are now having equal attention with the dynastic and political history. The
histories of evolution of modern conditions may attract one class of readers, while there are others, keenly interested in knowing the history of art, science, religion and philosophy. But the sum-total of our present historical knowledge is not more than a mere glimpse of the vast complex of the panorama of ages, most of which lie for ever beyond our ken.

The appreciation of the value and importance of historiography as an art is now on the wane. On the contrary the science of history has been rapidly developing in India during the last two or three decades. It is also gaining recognition among historians, as a distinct subject, with a group of auxiliary sciences. The real auxiliary sciences to history are those which deal with the relics of the past that have escaped the ravages of time and man. These sciences are: the science of language (philology), of writing (palæography), of seals (sphragistics), of coins (numismatics), of weights and measures and archaeology in the widest sense of the term. These sciences underlie the whole development of scientific historiography. Of late, even the art of collection and preservation of old manuscripts and other records has become a sine qua non of historical research.

Broadly speaking, history deals with all that has happened, not merely the phenomena of human life but those of the natural world as well. In fact, it deals with everything that undergoes change. Any inclination to unearth the knowledge of this change necessarily presupposes a search for evidence, which lays threadbare the whole fabric of the past. Every small discovery thus made helps the reconstruction of history.

Success in a discovery or an invention depends materially on the correct formulation of the original hypothesis. Imagination plays an important part in this formulation. Unless there is correct data, however small, to support the hypothesis, imagination is not likely to give a successful lead. The existing knowledge of our social, political and even religious conditions of the historic times is so indistinct, defective and misleading that it hinders rather than helps the imagination
of the researcher. The researcher cannot, therefore, select his field according to his choice. Either he must explore the material as it comes to him or leave it untapped. The indiscriminate choice of material by an individual researcher has often produced disastrous results. Once the material is examined from an individual point of view, the rejected material is either neglected thenceforward, or, its use is further prevented through its being destroyed, misplaced or lost. It is true that by the Old Monuments Preservation Act\(^1\) the inscriptive record is prevented from being destroyed by human agency, but its gradual deterioration through natural causes continues almost uninterrupted. Scholars working in any field have also a general tendency to leave alone any material which has once been touched by their fellow-workers. At the same time, not infrequently, improved information and important results have been secured by a re-examination of such material. The twenty inscriptions edited and re-edited in the *Epigraphia Indo-Moslemica* afford good examples in this respect. Any attempt at a partial use and publication of any historical source on the part of a researcher is, therefore, undesirable. The self-complacency shown in the limited use of a source often proves unsound and imperfect. Haphazard study of immovable inscriptive records is not, however, as disastrous as that of movable records in the possession of individual families. Almost all the source-material of our national history is entirely in the possession of private agencies. The civil and military administrative systems current in India before the British advent encouraged the hereditary preservation of official records with families, members of which held important posts in the administration. But the subsequent change in the administrative system made the matter still worse by its rendering the record utterly valueless from the possessors' point of view. Deplorable neglect and destruction was the natural consequence. In view of these factors, to expect this

\(^1\) The Government of India Act, No. VII of 1904 entitled "Ancient Monuments Preservation Act".
material to survive for re-examination or for detailed scrutiny in future is, therefore, not without risk.

As the field of the researcher in historical material is still uncertain and undefined as explained above, it is absolutely necessary for him to adhere strictly to certain principles and fulfil some requirements in the presentation or recording of his historical material. The prime object in the collection of historical sources is to utilize them for historical reconstruction in respect of events, persons, families, places, political groups, religious sects, kingdoms or the nation as a whole, irrespective of the degree of utility these sources may possess. But no material can be thoroughly exploited until it passes through three main stages of study. The first stage begins with its search and ends in the recording of the individual finds. The second stage is that of classification and co-ordination of these finds. The third stage is the transformation of the material into a succinct story through scrutiny, amplification and filtration of the material recorded. All these three stages are interdependent and the progress in one is governed by the progress of the other two stages. Every improved version of a story stimulates further research in the field and at the same time acts as a corrective to the inconsistencies that may have crept in the co-ordination and classification of material. The degree of industry, discretion and scholarly ambition exhibited by workers in the first two stages of study contributes in no small way to an accurate synthesis of material in the third stage. The greater the regard evinced by a researcher for the needs of both the co-ordinator and the historiographer, the stronger is the foundation of their work. A researcher is thus to offer his assistance to the historiographer in the filling up of any possible gaps in his story, and also to help the co-ordinator to have a thorough grasp of the material. He should also indicate the scope of this material in all its bearings. In the same manner, the co-ordinator is expected to help both the researcher and the historiographer by observing rigid scrutiny, proper classification, utmost care in the preservation of facts in their true
colour, and discretion in weighing the material. Such a procedure is bound to ensure a balanced presentation of all available material in its correct historical perspective. The historiographer, on his part, should crown the efforts of both the researcher and the co-ordinator by his thorough exploitation of the material, not to say its artistic and scientific presentation. The cumulative result of all these efforts at historical reconstruction cannot but fail to provide a reliable guide to future generations, which is one of the foremost aims of scientific historiography.

Omission of any one stage described in the foregoing lines is not without its adverse effects. Any material not subjected to the processes characteristic of these stages is lost sight of by future historiographers, co-ordinators and researchers alike. Stray material, howsoever valuable, is not always within the reach of the historiographer. Its direct use, by historiographer is not always correct or complete, and hence unsafe. There are instances, innumerable enough, in which important material has been directly used by historiographers in their works relating to historical personages, families, states or sects without proper reproduction, and hence overlooked by subsequent writers. The justification for this overlooking is generally based on two grounds: (a) the authenticity of the material presented is not satisfactory enough for its scientific recognition, and (b) the conclusions based on any material not adequately reproduced do not allow the necessary verification. It is almost impossible for any historiographer to carry on a search for the hidden sources of historical works as such a task is not only tremendous but both difficult and indecisive. Even the co-ordinators feel their inability to take stock of this hidden material correctly, fittingly and with any degree of confidence about its authenticity and truth, and consequently the material is ignored. All the three stages of study as outlined above are, therefore, absolutely necessary as they alone will provide us with a synthetic view of our history, which is nothing but a true reflection of the past experiences and experiments of the national life of our country.
CO-ORDINATION OF EFFORTS

A true historical perspective is obtained through an evaluation of sources, a comparison of details and an exact determination of historical events, pertaining to any historical study. Such an analytical study enables us to establish firmly and accurately the relation between historical facts and their true causes. A student of history is almost bewildered by the multitude of depositories of sources in which he seeks the documents he requires, and this bewilderment is still more heightened by the discouragement he gets when he finds that the required documents are absent in these depositories. There are very few countries, indeed, in which records have not passed through a period of neglect and destruction. The places where the students expect to get the desired material are often found void of them. On the other hand, the individual collections and publications preserving stray material on varied subjects are not usually within the reach of an individual scholar. The facilities for gathering the required historical information from the available material are, as a rule, insufficient, if not absolutely wanting. The only remedy, under the circumstances, is, therefore, to encourage consolidation of the source-material before scholars are expected to reap the advantages of the diversified and disconnected material lying about in depositories. The vastness of the material does not allow its being handled by one single effort. Several efforts at several places must be made so that they may ultimately help a thorough investigation of the problems of history. But to consolidate any sources is not simply to put them together. Real consolidation is that in which all threads of information, without losing the relative value, influence, aspect or importance, are welded together and brought within the easy comprehension of scholars. To attain this high ideal, attempts at
consolidation from several quarters and from different points of view are necessary. In their absence, the writing of history is bound to remain incomplete and imperfect.

Indexes, lists and tables are suitable devices through which individual efforts or stray references can be linked up or consolidated. Each of these devices has its own field and scope of utility. Name and place indexes are more effective for reference or cross-reference rather than for consolidating the material. But they are effective only if they accompany the material itself. Mere lists, bibliographical or otherwise, serve for reference in detail and at the same time provide students with an independent guide in the subjects concerned. These lists are particularly helpful in the study of applied sciences in which individual problems of small magnitude are to be investigated. While indexes are an organic part of a book, the tables mentioned above attempt to classify and coordinate the efforts of different scholars in the collection of historical material and thus provide an independent instrument of research. The methods followed in the compilation of these tables differ according to the purpose they are intended to serve. In the *Epigraphia Indo-Moslemica*, Volume II, pp. 30-144, Dr. J. Horovitz published a "List of Published Mohammedan Inscriptions of India—1788 to 1910". In his introductory remarks to his list, he specified his object as:

"In the present list I have aimed at bibliographical completeness with regard to the inscriptions of which either the original text or at least a full translation has been published omitting all those whose contents have been described only in a general way. Of these actually published, the following classes have been purposely omitted:

(a) Inscriptions which consist of quotations from the *Quran*, without containing date or name of ruler.
(b) Persian inscriptions on Christian tombs.
(c) The inscriptions on the Sikh guns (published in a separate volume entitled "Inscriptions on the
Sheikh Guns captured by the Army of the Sutledge, 1845-6.

(d) Inscriptions on movable objects (swords, vases, vessels, etc.) other than guns.

The inscriptions have been classified according to places to which they belong or where they were found when published.

The geographical arrangement seemed to me in the case of Muhammadan inscriptions to have decided advantages over the chronological or dynastical classification, usually adopted in the case of other Indian inscriptions. A chronological index has however been added which it is hoped will facilitate the use of the list for historical purposes.

To this list of 1259 inscriptions are added a chronological index and a list of undated inscriptions. Dr. Horovitz's aim is purely bibliographical. As he gives particular prominence to geographical arrangement, it is apparent that his main object is to make his list a guide to researchers in carrying out further search for inscriptions at different places. He has, however, tried to make his list useful to other scholars by adding to it a chronological index. These indexes do not serve the purpose of historiography as efficiently as the classification and co-ordination of inscriptive material would have done. Such classification and co-ordination to be effective and purposeful, must have, however, a twofold aim of recording exact documentation and giving, after proper scrutiny and suitable arrangement, an authentic summary of the material.

Co-ordination of sources should:

(a) represent accurately their historical and cultural contents in all their aspects;

(b) present these sources in a manner by which their relation to time, place, person and event becomes explicit;

(c) classify all homogeneous and contemporary evidence in a thoroughly factual manner;
(d) incorporate all details of reference supplied in the original publication;
(e) afford facilities for reference and cross-reference by providing supplementary name, place, and dynastic indexes;
(f) have its own easy and simple scheme of reference; and
(g) be by itself a limited and exhaustive study of the field covered.

Such a co-ordination of sources should aim at dispensing with the necessity of any further study of the material itself by historiographers. It should comprehend the results of all previous research on the subject with a special eye to its utility for historical reconstruction. Mere arrangement of the sources under person, place or event, is by itself imperfect and too limited in its scope and utility. The only appropriate and comprehensive arrangement is the chronological order, which provides facilities for all purposes. It removes the possibility of a mixture of the less reliable non-contemporary evidence with dependable contemporary evidence. It enables us to arrive at the truth by the detection and removal of disjointed and corrupt accounts given by later chroniclers. In short, co-ordination of sources means the setting of the historical and cultural material so far discovered in the framework of time, place and person with a view to determine its comparative value in relation to the past time and events. The test of success achieved by such a co-ordination lies in the degree of confidence and ease which it induces in historiographers in the execution of their work. The closer the scrutiny of sources, the more reliable is their co-ordination. Complete accuracy of details and proper placing of the evidence in its time sequence afford ease to historiographers in understanding the material with all its true implications. The responsibility in co-ordinating the sources is, therefore, enormous. Patient industry and zeal for truth without undue bias for tradition or irrational sentiment can alone enable the co-ordinator to discharge this
responsibility successfully. It is only the co-operation of the researchers that can lighten the labours of the co-ordinator. We shall discuss in the sequel in what respects and manner this co-operation is necessary. The greater the co-operation, the wider and more appropriate is the use of the material presented.
INSCRIPTIONS AND OTHER SOURCES

Inscriptions received preferential treatment in the past in the field of historical research, and they still continue to receive it in spite of the fact that the types of the inscriptions now being published possess practically a very limited value as sources for historical study or for the study of allied sciences. This remark is particularly applicable to the inscriptions relating to the Muslim or the later Hindu period. Official, semi-official and private correspondence, news-letters, news-sheets, farmâns, sanads, deeds of gifts and other papers pertaining to accounts, as also narratives, memoirs, observations and genealogies are the various kinds of historical material, which has been and is being made available in plenty for public use through private and other enterprises. Whatever be their minor faults and deficiencies, they are elaborate and direct witnesses of their times. They undoubtedly possess a superior value as sources of history. Their importance to caligraphy is indisputable, and their contribution to philology is unquestionable. With all these superior claims for better treatment, they are, however, deplorably neglected. The reason for this invidious treatment is not to be found in their merit or demerit but in the blind imitation of the present scholars in continuing the methods and practices of pioneers of research.

At the beginning of the second half of the nineteenth century, the research in the field of national history on Western scientific lines was initiated in this country, and a systematic search for documents and manuscripts was conducted through paid agencies with the special patronage of Government. It was natural that, in the early stages of these scientific investigations, this search was characterized by a very strong desire to discover historical evidence of the earliest possible date. Documents were not easily obtainable at the time as the
sources to be tapped for this purpose were mostly unknown and their custodians unsympathetic. Especially for the ancient period, no paper documents are available. The inscriptions, being the only available authentic sources, received, as a matter of course, the exclusive attention of those scholars. The pioneer scholarship of the time did not possess the advantage of practical experience gained by modern scholars through the persistent and progressive work of generations of research. Philology was then in its infancy, and deciphering of various scripts was a problem bristling with ambiguities and doubts. Such a stage of research rightly demanded publication of every find with all the means for the verification of the original text. The reproduction of inscriptions in blocks of estampages and photographs was then a necessity to guard against possible errors of decipherment. Readings and transliterations were also necessary to secure criticism and guidance from Western scholars. Philological study required every inscription to be so treated irrespective of its value and utility for other purposes. The prevalent absence in scientifically sifted material justified an elaborate record of these inscriptions. In fact, these inscriptions have laid the very foundation of the present structure of national history. These conditions cannot, however, continue to prevail for ever especially when every effort is being directed to unravel the sources of all kinds and from all quarters and when public interest is roused for the appreciation of history in its true spirit. In spite of this change, however, the need for a revision of practices and procedures of pioneer scholars does not appear to have been recognised.

The ancient inscriptions have practically no parallel in paper records as sources of information. Those of a particularly later date are now becoming available for study and publication. At the same time, paper records of this later period are now found in abundance. These later records are neglected particularly on economic considerations and all the valuable material contained in them is thus lost to the nation. At a time when we are tolerating this deliberate national sacrifice, much money is being spent on the publication of fac-
simile blocks or collo-type plates with transliterations of inscriptions of the past three or four centuries. There is, therefore, very little justification for the costly publication of inscriptions which are less valuable both historically and philologically at the exclusion of the official documents and other contemporary material. It is true that inscriptions are generally under Government care and officers responsible for them are not ordinarily in touch with other historical sources. But this simple monopoly in stone inscriptions is not a convincing reason why the expense of blocks etc. of inscriptions of later date should be given preference to expenditure on the publication of other highly useful sources.
A RÉSUMÉ OF THE INSCRIPTIONS PUBLISHED IN THE EPIGRAPHIA INDO-MOSLELMICA

A résumé, purely from the historical point of view, of the inscriptive records and the contributions to Islamic culture and history by veteran scholars through the pages of the *Epigraphia Indo-Moslemica* will no doubt serve as a background for our present study. The *Epigraphia Indica* is one of the oldest periodicals dealing with material for ancient Indian history in general. The Government of India has been publishing it at its Central Press. It is now running into its fifty-eighth year and the latest biennial issue No. XXVI is that for 1939-40. Owing to the widening field of its activities consequent upon a large number of inscriptions becoming available, the Persian and Arabic sections had to be separated and brought out as a supplement. Accordingly a "Supplement" was first issued for the biennium 1907-08 in 1909 under the editorship of Dr. E. Denison Ross. The second issue for 1909-10, however, assumed independence under Dr. J. Horovitz in 1912, and since then the series is entitled *Epigraphia Indo-Moslemica*. Dr. J. Horovitz saw through the third volume of the series in 1914; but the issue for the fourth biennium 1913-14 published in 1917 again changed hands. Since then Mr. G. Yazdani has been successfully running this series and has edited so far thirteen more volumes and one "Supplement". The scholarly zeal and industry of this veteran archaeologist augurs well for the future growth and expansion of this useful series. The publication of the series was not much in arrears during the last three decades, and the latest issue for 1937-38

---

1. The writer is not competent to review the linguistic side. That is why the *Epigraphia Indo-Moslemica* has been chosen for this study. It is proposed to present difficulties specially of the historians and co-ordinators who do not know the language of the material also.
was out in the second week of September 1941. The first
twelve volumes were published at Calcutta and the subsequent
four with the "Supplement" at Delhi by the Government of
India Publication Department.

The band of scholars responsible for the series is not
large, only nineteen scholars contributing 105 articles in all.
Among these are one Parsi, three Hindus, four Europeans and
eleven Muslims, contributing 1, 11, 8 and 85 articles respec-
tively. Of the last 85 articles, 55 were by Mr. Yazdani alone.
Four volumes out of the seventeen are one-scholar products:
Volume 1 is exclusively devoted to the articles by Major T.
W. Haig, Volumes 6 and 13 to those of Mr. Yazdani and the
"Supplement" to that by Dr. M. Nazim. It will be apparent
from the Table of Contributors\(^1\) appended that next to Mr.
Yazdani stands Khan Bahadur Zafar Hasan in the length of
his association with the series though he has contributed only
six articles. Rāmsingh Saksena joined the series with his
quota of six, Maulawai Shamsuddin Ahmad and Hamid
Quaraishi of 5 each, Haig and Khwajah Muhammad Ahmad
of 4 each, C. R. Singhal and Dr. M. Nazzim of 3 each, Dr. J.
Horovitz, Ghyani, Moneer and Fazl Ahmed Khan of 2 each,
and the rest with their single contributions.

The 105 articles extend over 830 super royal pages of
printed matter and 337 full-sized Plates containing 589 ins-
criptions. The printed matter is made up of readings with a
few transliterations, translations and, in some cases, brief ex-
planations of the readings and locations of the inscriptive
tables noticed. A few learned introductions tracing local or
dynastic histories have also appeared. Attempts at identi-
fication of persons and places have been made in a few in-
stances. Indexes are provided for the last four issues only.
Correspondence of the dates recorded in the oriental eras has
been given for many inscriptions, but in majority of these
cases, only approximately. The Quorānic passages which fre-

---

1. Vide Appendix A.
quently occur in the inscriptions have not been reproduced or translated each time. Care has also been taken to describe the different styles of writing. In a few cases an attempt has been made to explain the bearing of the finds on the existing historical data. The volumes are not numbered but dated with the years indicating the biennium. The inscriptions printed in blocks do not bear consecutive numbers, nor do the Plates. Every issue has its independent numbering in Roman figures for its Plates, and if more than one inscription have been included in any Plate, they are subnumbered with small alphabet signs. These Plate numbers and sub-numbers are sometimes identical with the serial numbers of the respective readings and translations, but generally these Plate numbers are quoted or referred to in the remarks introducing the inscriptions. As a rule, readings or translations of each article have its own serial number. Almost all the inscriptions recorded have been reproduced in blocks excepting very few, the impressions or photographs of which were not obtainable or distinct enough for such reproductions. Only in the first number Major Haig has given a purport of some inscriptions instead of their full translations. In Volume 2, Dr. Horovitz has embodied a very valuable "List of the published Mahomedan Inscriptions of India—1788 to 1910", which covers 115 pages.

About 650 inscriptions have been published. Of these, twenty are re-edited after due revision. Some thirty are from broken or worn out tablets. The matter deciphered from them, being either unintelligible or inadequate, has no historical or cultural value. Of the remaining 601, some 59 have been used or reproduced before elsewhere, and 20 more either summarized or referred to by other scholars previously in their works. All these, except the 'broken ones', have been included by me in the Chronological Table now being presented for the use of scholars.

The classification\(^1\) of the 601 inscriptions included in my Chronological Table presents interesting data for tracing some facts about the characteristics and tendencies of insessional records. These inscriptions are not, however, representative of all the provinces in India. The Bombay Province and the Nizam's State claim the largest share of them, while other provinces are meagrely represented, though a fairly large number of inscriptions is still available for study in these provinces. It is true that a large number of inscriptions from Northern India has already been published by other agencies, but still it is reasonable to expect more from that quarter in the series. The maintenance of a regional outlook in the publication and study of historical records has not always been helpful either to scientific research or national progress. The characteristics and tendencies of the insessional records are, indeed, instructive both socially and politically, but it is unnecessary to recapitulate or explain here all their minute details already supplied by me in my classification, which is self-explanatory. However, we may review these details broadly.

Persian and Arabic inscriptions are available in India from the eleventh century. The numbers 1 and 6 for the eleventh and twelfth centuries are, however, negligible. The progressive number of the inscriptions in the sixteenth and seventeenth centuries corresponds fittingly to the rise of the Muslim power in India, while its sudden decrease in the next two centuries can be suitably accounted for in the decline and fall of that power. Of the total number of 601, 344 or 57% are religious, 112 or 18% military, 47 or 8% administrative, 88 or 15% cultural and 10 or 2% miscellaneous. In the two centuries, which saw the rise and growth of the Muslim power to its zenith, the change in the tendency is more remarkable and particularly instructive. It can very well be seen from my analysis how the original religious tendency underlying the construction of buildings and allied works gradually de-

\(^1\) Vide Appendix B.
clined in intensity and that for the erection of popular and cultural works preponderated. A further examination of this kind may reveal various other aspects of these inscriptions, but it is not intended in the present survey to deal with them.
SCHEME OF REFERENCE

The general awakening regarding historical research in India has been responsible for the appearance of numerous publications recording stray historical sources. The scarcity of these sources experienced in the beginning led scholars and publishers to support all spasmodic efforts to acquire them. All these factors led to the publication of these sources without any previously planned arrangement or any systematic organization of research. The deficiency of material and want of adequate training which characterised a majority of early historical publications in India were responsible for the absence of any proper scheme of reference in them. In spite of the progress of scientific historical research, and our contact with systematically organized research publications produced in advanced countries, this valuable and necessary feature of research publication still continues to be neglected.

The special merit of a source-book of history consists in its provision of a well regulated scheme of reference which facilitates reference to its material in the most compact and abbreviated form. Such a scheme is, in fact, an inducement for an extensive use of the material. The matter actually used from a lengthy source hardly exceeds a sentence or two; and if a small quotation or citation from such a source is to be documented by a long and intricate train of expressions, the disproportion of the material used and its documentation tends to discourage or neglect its use. Such a wilful neglect is often tolerated though it is detrimental to the interests of history. Separate numbering or indexing of new sources attracts the direct attention of the readers. But in individual source-books or their series, the need for a special scheme to ensure facilities for easy, simple and short reference to the material is keenly felt by scholars. A scheme for reference must provide:
SCHEME OF REFERENCE

(a) a fixed abbreviation for the title of the source-book;
(b) a serial numbering for parts or volumes of the source-
books issued;
(c) consecutive and continuous numbers for the sources
published, irrespective of their titles, authors and
contents, as also the parts of the series in which
they appear; and
(d) identical number for the reading, transliteration,
translation or the block (or illustration), if any,
of the same source.

The scheme of reference generally found in ordinary books
and periodicals is quite unsuitable for source-books of history,
for the simple reason that, while the former are mainly sub-
jective in their nature and contents, the latter are purely ob-
jective in their form and character. The numbers of sources
in a source-book have for the reader particular significance
and value, which their page numbers are incapable of com-
municating. But the scheme followed in the Epigraphia Indo-
Moslemica is the same as that adopted in the publication of
ordinary books and periodicals. This series does not, there-
fore, possess the special feature which it ought to have dis-
played, in view of its predominantly historical character, and
particularly in view of its declared aim of recording inscrip-
tional sources. It is perhaps the concern of the publisher to
adopt a suitable and uniform reference scheme for his series
so that the material enshrined in it by different scholars with
great skill and industry, not to say personal sacrifice, may
lead to its thorough exploitation by competent historiogra-
phers.
INSCRIPTIONS

History is the record of events ranging from a trivial occurrence of individual interest to one of great national importance. This record is preserved in various historical sources such as epistles, narratives, memoirs, inscriptions, etc., which have survived all the destructive forces of time and man. The earliest among these sources are inscriptions, which are mostly recorded by incision on stone or metal. These inscriptions owe their survival not to any human care but to the durability and strength of the material on which they were recorded. Their artistic presentation generally varied with the development of art current in the specific periods of history to which they belong. Almost all the Muslim inscriptions were carved in relief. In India, but for the religious and communal sentiment that was mainly responsible for the production of these inscriptions, very few of them would have been either produced or preserved sheerly through historical instinct. In fact, every one of these inscriptions cannot be said to possess the qualities of a historical record as such. They do, no doubt, perpetuate the memory of the transactions described in them; and to some extent form the links in the complicated process of historical reconstruction; but, as compared with the administrative or legal records, they possess very slight historical value. Some of these inscriptions are, no doubt, actual copies of administrative documents. The Muslim inscriptions do not as a rule furnish any extraneous details as are generally met with in Hindu inscriptions. The Muslim inscriptions announcing endowments, gifts, etc. are few and far between as compared with Hindu inscriptions of this type. Besides, the Hindu inscriptions have attained a special importance owing to the great dearth of historical sources pertaining to the Hindu period of history. In the Muslim period of history, however, this dearth has been
greatly removed by the Muslim chronicles and consequently the Muslim inscriptions have lost this special importance. The Muslim inscriptions generally state the name of the builder, and the details of the building along with the name of the reigning king under whose patronage or protection the building was constructed. Nevertheless, the importance of these inscriptions has to be recognized as they provide us the missing links in the reconstruction of the succession lists of public officials and families, although their use in the linking up of historical events is very limited. In the rarity, if not complete absence, of Muslim copper-plate inscriptions, we have lost an important source of detailed personal history. However, our main consideration in this dissertation is confined to stone inscriptions. A study of these stone inscriptions which still afford very valuable and definite data for the reconstruction of our national history is all the more desirable, as they serve as corrective to the narratives of the period which are not very accurate in their record of minute details.
LOCATION

The stone inscriptions are the only kind of historical records, which, though decayed gradually through weathering and destroyed by the ruin of buildings, had the advantage of being preserved on the site itself, thus escaping the possible injuries consequent upon rough handling and shifting from place to place. The location of a stone inscription provides us with direct circumstantial evidence for the determination of its age, as also for the identification of dates, persons and places mentioned in the inscription. The movable records, on the other hand, do not possess this natural advantage inherent in a study of inscriptions in situ. Local history and traditions connect the inscriptional tablet with some event or the other, and thus furnish evidence for their mutual corroboration. The details of the position of a tablet not only adds to the information contained in the inscription, but generally explain the importance and magnitude of the deed referred to in the inscription. In fact, this source of information is the only background for the study of the inscription itself. The more detailed and accurate the information, the more effective is the assistance rendered to scholars in their study of the inscription in its clear historical perspective. The details of location not only facilitate a correct reading of the inscription, but at the same time suggest helpful conclusions and ensure the proper application of the inscrptional evidence to the reconstruction of history. Especial care is, therefore, necessary in ascertaining and recording the following details along with the inscription:

(a) locality with the specific division and sub-division of the province or state;

(b) description and history of the building in which the tablet is fixed;
(c) situation of the tablet along with the impressions of the researcher about its location,—prominent or otherwise;
(d) probable original place of the tablet, if it shows signs of its having been shifted;
(e) date and period of the fixing of or engraving of the tablet;
(f) impressions about the stage of the structure at which, or the date on which, the tablet appears to have been associated with the structure;
(g) original place and purpose of the tablet, if found detached;
(h) local history and traditions connected with the tablet and the building, and their surroundings;
(i) existing condition of the tablet as regards deterioration, neglect, damage, etc.; and
(j) present ownership of the tablet and the possibilities of its preservation.
DATES AND DATING

Time is of the very essence of history and historical research worth the name. The nearest approach to historical truth or facts of history can be made through repeated attempts to fix the narrowest possible time-limits for individual events. Clear time sense on the part of a scholar helps accurate scrutiny of historical material, and to develop this sense, perfect understanding of the conventions of the time indications current in the different periods of history is absolutely necessary. Almost all the calendrical systems of the eastern hemisphere and a pretty large number of eras were current in India during different epochs and periods of history. These calendrical systems range from the purely solar to the purely lunar ones. Some of them maintain mathematical accuracy in their calculations, while others rely more on human observation of lunar phases in their reckoning. Even in the use of one and the same calendrical system, diversity in commencing the calculation of months and years is in evidence. Thus, for developing the correct time sense, a study of the varied and multitudinous calendrical systems and eras is absolutely necessary. But in the study of Arabic, Persian and Urdu inscriptions in India, we are mainly concerned with the detailed knowledge of at least four or five systems, viz.: Hijrā, Ārabi or Shāhīr, Ilāhī, Fasli and Jalūs. Particularly we must guard against the vagaries of the calendrical systems with a view to ensure an accurate time sense. 36.672.

The Hijrā year has no concordance with the natural seasons in India, and it rolls round the solar year in a small period of thirty-two solar years. Its correct position in a solar year or season cannot, therefore, be easily determined. Hence, any approximate correspondence of one Hijrā year in terms of the Christian year extends over two solar years, instead of its being limited to the maximum period of a lunar year. A
proper and correct time sense, therefore, requires that any
date given in the Hijrā era is indicated by its definite corres-
pondence in the Christian era. This is especially necessary
when Hijrā years and Arabi lunar months are mentioned in
an inscription.

The Hijrā year is purely a lunar year, and the calendrical
system associated with it for the specification of dates is also
a lunar one. There is no arithmetical accuracy in this system
of reckoning months and years. Visibility of the moon is the
sole factor which determines and controls this system. The
first Chandra, or first day of a month, commences with the
visibility of the moon. This visibility is liable to variation
in different geographical areas and is also dependent on the
uncertainty of human observation. Once a day’s difference is
initially introduced in any particular area in the commence-
ment of a month, the same is carried through the whole
month, i.e. until the beginning of the next month as deter-
mined by the observer. The day of the month or Chandra
changes with the sunset, and hence one Chandra or a day cor-
responds to two half days of the Christian era or Roman
calendar. The exact time of an historical event must deter-
mine whether the Chandra should correspond to the first or
second half day of the Roman calendar. It is safer to calcu-
late the correspondence of the weekday, if it is combined with
the Hijrā date or Chandra. The weekday definitely enables us
to judge whether the first or the second half of the day in the
Roman calendar is really meant. But here again there can
be no guarantee of accuracy. It has been noticed that in some
areas the practice of counting a weekday from sunset was also
current. In such areas sometimes “yesterday” is indicated by
a “third previous weekday”. This practice causes some con-
fusion in determining the dates in ‘Akbhārs’ although this
time indication is no mistake in itself. One writing at, say
8 p.m. on his Monday, would certainly mention an event hap-
pening at, say 5 p.m. of his “yesterday”, as Saturday. His
Sunday commenced one or two hours later and ended one or
two hours earlier than the time of his writing. It, therefore,
depends upon the time sense conveyed in the writing as to how the appropriate correspondence should be fixed. Generally, the day's position is given in all the tables of correspondence, and hence it is necessary to be cautious in determining the correspondence of the date of an event occurring after sunset. On a closer scrutiny of Hijrā dates, this difference of one day can be reduced to nil in some cases, if the meridian of the moon is 0-50° or below on the supposed Chandra day. In these cases there is no possibility of visibility of the moon. But since very handy tables of correspondence are available, it is unnecessary to give here formulas for general calculation of the correspondence. While using these tables, however, care should be taken to see whether the correspondence is mentioned in the Old Style or the New Style, and to adjust the corresponding dates according to the style followed.

There is some confusion about the Ārabi or, Shūhūr San in the Epigraphia Indo-Moslemica. The Shūhūr San or as it is sometimes entitled Ārabi San is generally mentioned in Arabic numeral words. This terminology is definite, and is not used in recording the Hijrā year, which is always mentioned in figures or chronograms. The terminology of expressing Shūhūr San is:

The words indicate the figures from right to left. Example: Shūhūr San Āhad Arba’in Mī’aelin wa Alf means 1, 40, 200 and 1000. Add these values together, or take the initial numerals of these values and place them serially from right to left. Thus we get 1241. Whenever a year is mentioned in these terms, it is safe to treat it as the Ārabi or Shūhūr San. This
San is also called Mīga Sāl in the Deccan. I record below a detailed account of this San:

**Initial point**: It is believed that the Arabic era originated from the ascension of Musruk to the throne of his father Abraha in 589 A.D. The first year of the era, however, coincided with 600 A.D., and its commencement occurred in the latter half of May 600 A.D. Another version of the origin of this era is that the era may have been an off-shoot of the Hijrā reckoning probably originated in or closely about the year 745 A.H. (i.e. May 15th, 1344 to 3rd May 1345 A.D.), and it may have been introduced in the southern part of Mahārāṣṭra by Muhammad Tughluq during his regime. This view finds support in the circumstance that a new era was introduced by the Jawhar Chief in commemoration of his investiture with “Shah”-ship by Muhammad Tughluq. Whatever be the origin of the era, it is definitely ascertained from the records now available that its initial point must be taken as 600 A.D. for our calculation of this era.

**Year**: The year is sidereal solar year commencing with the day on which the Sun enters the Nakṣatra Mīgasīrṣa (constellation Orion). The year is, however, indicated in Arabic numeral words. The commencement of the year approximates from 23rd to 25th of May, according to the Old Style, and 5th to 7th of June, according to the New Style, or after 56 days from the commencement of the Mešādi solar year (luni-solar year). The Mīga Sāl or Arabi San, being a solar year runs into the second Hijrā year by ten days, i.e. ten days of a month falling at the beginning of the Mīga Sāl are repeated at the end of the Arabi year. In order to distinguish the initial ten days of the month from the ending ten days, they are designated “Awāl Sāl” and “Ākhīr Sāl” respectively. These terms are not, however, applied to the rest of the year.

---
1. The earliest mention of the Shāhīr San in the inscriptions published in the *Epigraphia Indo-Moslemica* is that of 811 corresponding to 1410-11 A.D.—Ins. No. 106, Broach.
Months: Arabic, Muslim or Hijrā months and dates are combined with the Ārabi or Shūhūr San. Sometimes the Shūhūr year is mentioned along with the Čhaitrādi Saka months and tithis also.

Currency: It is not known how long Arabs used this era, but this was in extensive use in the Marāṭhā country during the sixteenth and seventeenth centuries A.D. Although it gave place to the Deccani Fasli San later on, its use continued till the middle of the nineteenth century. Some stray examples of its use in Gujarāt, Māṇḍu, Telingana are also available, but this use may be due to the contact of the invading armies from the areas using this era.

Formulas for Computation:—

(a) Ārabi Sāl plus 599 = A.D. year.
(b) A.D. year minus 599 = Ārabi Sāl.

N. B.—If the Ārabi Sāl is advanced by six months, one more year should be added for getting the A.D. year. Similarly for getting the Ārabi Sāl, one more year should be deducted.

Owing to my ignorance of the languages concerned, I cannot say whether there are any more instances of Shūhūr San in the inscriptions than those already taken note of in my Chronological Table. The mention of a year in Arabic numeral words should be considered sufficient evidence to distinguish this San from the Hijrā year irrespective of such a combination of numeral words being preceded or followed by the words “Shūhūr San”.

The actual foundation of the Tārikh-i-Ilāhi or Ilāhi era or Divine era took place in 992 A.H.. An order was accordingly issued by AKBAR that the New Year, which followed close on the year of his accession, should be made the foundation of the Divine era. It fell into disuse from Shāh Jahān’s reign. The calculation of the year of this era and its months is a very complicated problem. It requires calculation even to the extent of minutes, seconds, thirds and fourths. The formulas for the year and the months are also very complicated. As
the elucidation of this problem will occupy much space, a reference may be made to the tables showing the commencement of each year and month in my "Tārikh-i-Ilāhi".\footnote{1}

The fourth era in common use is that of Fasli. It appears that this method of naming the year must have been introduced only when the Ilāhi year fell into disuse in the reign of Shāh Jaḥān. In order to continue the official Hijrā year, which was ordered to be expunged from the state records from 963 A.H. (1556 A.D.) and also to adjust the inconvenience and loss caused by the adoption of a purely lunar year for revenue purposes, the first year of the Fasli San must have been fixed at that year and the next Hijrā year (964 A.H.) became Fasli solar or luni-solar year. The apparent initial point of the San as used in Bengal, Bihar, Benares, the North-Western Province, the United Provinces and the Punjab is 591 A.D. This San does not agree with the Deccani Fasli and must be so distinguished. The year of the Bengali Fasli, as it is called in the areas of its use, commences from Aświn Kṛṣṇa Pratipadā or begins with the full moon, next preceding or succeeding the Kanyā Saṃkrānti instead of the Saṃkrānti day. The formula for its correspondence is therefore:

\[(a)\] Bengali Fasli San plus 592 = A.D. year.

\[(b)\] A.D. year minus 592 = Bengali Fasli year.

\[N. B.-\]Of course, for the first three or four months, one more year is to be deducted from the Christian year, as it covers the major part of the Sāl commencing after the lapse of two or three months in the Bengali Fasli San.

As regards the Fasli San of the Deccan, I have to point out that it was an off-shoot of the Hijrā era from the year 964 A.H. in Northern India. It was introduced in Southern

\footnote{1. Tārikh-I-Ilāhi by V. S. Bendrey published by the Secretary, Shree Chhatrapati Sambhāji Charitra Karyālaya, Poona, 1933.}
India by Šah Jahān in the Hijrā year 1046 (26th May 1636 to 15th May 1637 A.D.) ; but instead of adopting the serial number of the Fasli year then current in Northern India, the Fasli Sāl of Southern India was made to commence with a nominal year 1046. By this time the difference between the Hijrā and the Fasli years had risen to about two and quarter years, and consequently the initial point of the Deccan Fasli calculates to 590 A.D.. The Fasli year is a sidereal solar year. There are, however, two variations in reckoning the commencement of this Sāl. The Bombay Fasli Sāl begins with the day on which the Sun enters the Mṛgaśīrḥa Nakṣatra just as the Shūhūr San, and the Madras Fasli year commences at the Karka Saṃkrānti— the nominal summer solstice. About the year 1800, it was, however, fixed by an arbitrary order that the Madras Fasli year should commence from 12th July and later by an order it was made to commence from 1st July. If the Fasli year is used in conjunction with Ārabi or Muslim months, the first ten days of a month falling at the commencement of a year are repeated at the end, as in the case of the Shūhūr San. These ten days should, therefore, be distinguished as “Āwal” or “Ākhir Sāl”. The Bombay Fasli took the place of the Shūhūr San gradually in all the parts of Mahārāṣṭra and is still in use in some of the Indian States in their official revenue correspondence. The Madras Fasli spread all over the country below Karnāṭak and is still being used in some places. The formulas for computation of dates in the Fasli San are:

(a) Deccan Fasli Sāl plus 590 = A.D. year.

(b) A.D. year minus 590 = Deccan Fasli Sāl.

N.B.—With the advance of five or six months in the Fasli year, the new Christian year commences. We have, therefore, to add one more year for obtaining the A.D. year and vice versa.

The Jalūs or the regnal years are also often used. These follow the Hijrā reckoning and their new year commences on
the date of coronation anniversary of the reigning prince concerned. Sometimes instances of the Jalūs of a king being quoted or continued by his successors are also traceable. It is not intended to give here a complete table of the Jalūs Sans, but it should be noted that in the case of the later Moguls even the usual practice of commencing the new year on the coronation anniversary is departed from.

There are other systems of reckoning adopted by Muslim writers of the Arabic and Persian sources such as Tipoo Sultan's Mohamadi era. Some discussion on chronograms may also be considered necessary at this stage in view of the frequent inaccuracy observed by scholars in determining the numerical value of chronograms in historical records. Perhaps it is possible to determine some of the conventions which may help scholars to minimize this inaccuracy. Such determination, however, requires special training in linguistics and has, therefore, to be left to the experts in the old and ancient usages of these languages.

With a view to ensure accuracy in chronology, I note below, in brief, some essential requisites which may be advantageously followed by scholars:

(a) The exact correspondence in the Christian era should be given with the week-day of every date mentioned in the original source.

(b) The correspondence of the commencement and the end of every Hijrā, Ilāhī, Shūhūr, Fasli or Jalūs year should be mentioned with the week-days.

(c) The correspondence of the commencement and the end of every Muslim, Ārabi or Hijrā month should be stated with the week-days, if the month is coupled with the year.

(d) The correspondence of the commencement and the end of the period, which is jointly covered by two or more systems of reckoning, should alone be counted for determining the limits of dates.
(e) The style of the *Fasli San*, whether it is Deccani Bombay, Deccani Madras, or Bengali *Fasli*, should be made clear if the same is not indicated in the sources.

(f) The correspondence of the ten *Chandras* or dates of a lunar month repeated in the same *Fasli*, *Shūhūr* or any solar year should be rendered in both ways, i.e. in "Awāl" and "Ākhīr Sāl", unless there is definite evidence to dispense with the need of mentioning either of them.

(g) The correspondence of both the week-day and the date should be recorded if these do not coincide.

(h) The correspondence of a week-day mentioned in an inscription along with a month, but not accompanied with a definite date, should be given for all the repetitions of this weekday in the month.

(i) The style whether New or Old, followed in the use of the Roman Calendar should be specified.

*N.B.—* Generally the *New Style* is adopted in India for historical purposes, from the date on which it was made current by a Parliamentary Statute in Great Britain. The *Hijrā* Tables, however, are prepared in both the styles. The authors usually mention the style adopted by them in the tables. Care should, therefore, be taken to ascertain it before using these tables.

It is unnecessary to point out specific instances of incomplete, inaccurate and inadequate correspondence in the *Epigraphia Indo-Moslēmica*, as the Chronological Table included in this book will reveal them at a glance.

The foregoing detailed discussion about the accurate and appropriate correspondence of dates, which is capable of creating real time sense of an event, is sufficient to convince the reader about its dire necessity. However, for a better under-
standing of the historical material and for a comparative study of the different sources, it is all the more necessary to provide, in this very correspondence, facilities for further calculations of time limits. These time limits are the very backbone of all historical reconstruction; and every effort to compress them into one correct whole helps to strengthen the composite structure of our national history, which still awaits the herculean labour of scientific research to make it pulsate with new life and vigour.
READINGS OF INSCRIPTIONS

Any remarks by way of comment on the readings of inscriptions or on the methods and principles adopted in recording them would be tantamount to a textual criticism pertaining to Arabic, Persian and Urdu sources. A person like myself, not conversant with these languages, is not, therefore, justified in offering such remarks. Any hints, however, indicating the difficulties experienced by co-ordinators and historiographers alike, will not be out of place here, and may perhaps deserve consideration at the hands of experts in historical research as well as in the science of linguistics. The deficiency in the system of vowel indication has apparently developed a tendency in individual scholars to use free discretion which has often led to a deviation from the common or established readings. In particular, a departure from the conventional readings of proper nouns has the effect of confounding the reader in his conclusions about the identification of persons, places and events. A well regulated scheme evolved by Persian and Arabic scholars will surely help to curb this tendency. Readers not conversant with the original language and the script of the inscriptions are generally concerned with the readings of the proper nouns and not of the text. Further the work of the historiographers would be made less faulty if all probable and possible readings of the text are noted along with the one given by the editor of the inscription. This will, of course, help proper evaluation of the evidence.

Inscriptional records seldom show any signs of voluntary tampering of their texts. Involuntarily, however, some errors, no doubt, enter the original text, but they are generally of the nature of scribal errors. The text of inscriptions does not afford much scope for textual criticism as such. The paucity of definite vowel signs and exclusion of a number of the commonest grammatical forms offer some hindrance in the reading
of the text; but cases of confusion, omission or shifting of letters, as also confusion of symbols and marks, are often met with. Their occurrence, however, would be rare in view of the shortness of the inscriptive text concerned and the abundance of the time and leisure usually at the disposal of the scribe. Instances of haplography, homoeography, negligence, dittography, confusion of words, unnecessary insertions and the like are not to be expected in an original document of this kind. In fact, there are hardly cases of emendation in inscriptive records. It will thus be seen that ordinarily an inscription requires no textual elucidation of the type necessary for constituting texts with the help of different copies and versions.

The stone inscriptions suffer from weatherings and age. Their texts are likely to deteriorate or disappear altogether. The contrast ordinarily produced through the difference of colours of the ink and the paper is absent in stone inscriptions, and consequently the human eye fails to grasp their contents with perfect accuracy. The grain of the stone causes no less interference in our decipherment. Unevenness in the incisions is full of deceit. Injuries to letters and coatings of extraneous matter on the surface disfigures the text causing no less annoyance to the reader. All these inherent and extraneous defects necessitate the restoration of the text disfigured or lost. These restorations are, however, of a disputable nature. The most scientific and yet simple form of presenting these restorations is to mark them as doubtfully accepted, and, at the same time, to distinguish them from the body of the text. It may be an act of intellectual integrity on the part of an editor to leave un-restored portions of text which he is unable to decipher, but it reflects little credit on him as textual critic. The restorations of injured texts can best be carried out by research scholars who actually work on the spot. The restoration of an inscriptive text is not a very complicated matter, as it can clearly be distinguished in the main body of the text by enclosing it in a rectangular bracket, if the smaller one is otherwise used in the main text. Restorations may necessitate supplementary notes and explanations for acquainting the
readers with the reasons and doubts underlying them. Here the question is not that of a comparative evaluation of variants of a text, but that of completion of the subject-matter either in substance or sense originally intended to be conveyed by the authors themselves. Such scientifically presented restorations cannot but greatly help the historiographers in their interpretation and use of the evidence furnished by inscrip-
tional records.
TRANSCRIPTIONS AND TRANSLITERATIONS

All historical research is generally characterized by an inherent tendency among scholars for cooperation with their confrères, as also a keen desire to obtain mutual confirmation of the results of their research. The material discovered by an individual scholar is immediately and eagerly presented by him for public use in order that it may contribute its quota to the outstanding problems of history. With this end in view, facilities by way of transliteration and translation are usually offered by him at great personal cost and labour. Transliteration is, however, superfluous when it accompanies the reading of an inscription written in a language which is normally expressed and learnt through the medium of one script alone. The same is not the case of languages like Sanskrit which are expressed and learnt through different scripts. The Devanāgarī script of a Sanskrit text may not be intelligible to a Tamil or Bengali scholar, although he may be competent to understand perfectly the text itself. This cannot be said with equal force with regard to the Marāṭhi text. The point is why public economy should not weigh against this unnecessary facility. A scholar competent to decipher and interpret a Marāṭhi text cannot be presumed to acquire this ability without a thorough mastery of Devanāgarī or Bālbodhī script. The Persian, Arabic and Urdu languages partake of the same characteristics as the Marāṭhi language in this respect, and hence call for no differential treatment.

The remarks made in the previous section with regard to the readings of inscriptions, apply generally to transliterations also. The method or scheme of transliteration, however, demands the special and immediate attention of scholars. At present, there is no uniformity in the use of signs for the indication of certain alphabets and vowel omissions in the Persian and Arabic languages. The Roman alphabet falls short in
providing transcription of sounds in these languages, and, consequently, this deficiency is made good by various signs which ensure no uniformity or convention. The diacritical dots and ticks are used by different writers for different purposes. So is 'hyphen' used in place of an inverted comma, while in the use of both the upward and downward single commas, no uniformity is observed. The inverted comma which is generally prefixed to words like dīn, daulāh, etc. is obviated by capitalization of the initial letters of these affixes, while in the combinations like as-Sultān, some begin as with a capital and some do not. The varied transliterations like Rahimtu'llāh, Rahamatu'llāh, Rahmatu'llāh or Faḍhal, Fażl, Fażil indicate the same persons. All these variations present difficulties in the identification of proper names. Even if these difficulties in some instances are overcome with the help of the context, they are not so surmountable when these variations appear in the index where they are separated from their contexts. Thus the very purpose of an index, viz. the co-ordination or consolidation of all references to a person or a place is frustrated. The obstacles created in the use of the historical material by the varied systems of transliteration deserve urgent consideratio and immediate removal. There should be no difficulty in enforcing upon the writers a style-sheet of transliteration standardized in co-operation with other leading publishers. Many attempts have, in fact, been made by renowned scholars and publishers to evolve and introduce sound systems worthy of

1. For detailed discussion on the subject vide:

(a) Transliteration of Arabic and Persian: Report of the Committee appointed to draw up a practical scheme for the transliteration into English of words and names belonging to the Language of the Nearer East: pp. 505-21, Proceedings of the British Academy, 1917-18, London, Volume VIII.

2. For style-sheets, refer to those given in Grammar Book: Encyclopaedia of Islam, and by the Royal Asiatic Society, the Bombay and other Universities in their Journals.
universal adoption for transliteration of the Arabic and Persian texts. At the same time, it is matter for pity that scholars themselves do not adopt a standardized or conventional transliteration system although they recognise its value for a correct and easy understanding of their material. Even if the enforcement of a standardized scheme of transliteration is not within the power of a single publisher, he cannot absolve himself from the responsibility of enforcing his own scheme for his publications. Such enforcement is simple enough if he insists that proof correction is carried out according to his scheme. Some concerted and vigorous effort on the part of learned bodies responsible for instruction in these languages is the need of the moment, because it is only through these bodies that a standardized system of transliteration of the Arabic and Persian texts can be universally imposed and made current.

The long established and wide use of the Roman alphabet has, no doubt, acquired several practical advantages. Similarly, the inherent attachment of European scholars to this system has given it an apparently superior status. But with all its claim for superiority, based on political and other extraneous reasons, it has got to be admitted that its inadequate foundation of arbitrary signs having no facilities for halving, lengthening or conjoining, is unable to bear the burden of any superstructure of consistent, systematic and complete notation. The Roman system of alphabet is too scanty in its resources to provide simply and effectively for the multiplicity of sounds of human speech and the infinite variety of their use in different languages and dialects. In fact, no system of alphabet in the world had originally such an ambitious and comprehensive aim as to provide suitably for all sounds extant in other groups of languages. The contingency of a language assimilating new sounds or shades and combinations of sounds has also to be reckoned with. Hence, the necessity for establishing an independent phonetic system of transcription is repeatedly emphasized by scholars engaged in international studies. Such a phonetic system will, of course, be expected to provide for
extensions in various directions and sufficient elasticity to bear any strain that may be thrown on it by the possible nuances of sounds that are now extant, and that may come into being through the intermixture of different peoples and dissimilar cultures. But its universal adoption is simply a matter of good-will and co-operation of individual scholars. In the absence of any agreed system of transcription the Roman system of alphabet remains as the only basis on which we depend for our needs.

Transcription and transliteration are two different processes. Transcription deals with sounds irrespective of any consideration of existing alphabets; while transliteration devises a method by which the oriental and other alphabets can best be transformed into the Roman alphabet without any regard to their original pronunciation. The sole purpose of transliteration is to replace the original script as far as possible. If a phonetic system of transcription is perfected and universally adopted, transliteration will have no use, but the impracticability of a common phonetic system is now generally acknowledged. The only alternative left to us is to harmonize both the processes with a view to enable us to render the inscriptive and other texts into Roman alphabet in the best possible manner. In spite of this harmonization, it is difficult to guarantee any strict adherence to such a system on the part of individual scholars. Its enforcement is impossible so long as most scholars, in spite of the fact that they affirm the desirability of having one single system of transliteration for foreign alphabets instead of the present chaos, feel justified in using their own systems and sometimes even different systems at different periods of their life. With all respect for the honest convictions of individual scholars in their deviation from a generally adopted system, the necessity and importance of a consistent and precise use of their own system by these scholars cannot be adequately emphasized. The minimum requirements of such a workable system are:

(a) uniformity of rendering, to avoid all ambiguities
resulting from the use of the same sign for totally
different purposes;

(b) avoidance of ambiguous diacritical marks or signs
as far as possible; at least they should be easy,
simple and distinctive; and

(c) preservation of the established usages of the English
language as regards spellings and pronunciations.

It is safer to disregard all ambiguous signs, but if their use is
unnecessary, it should be retained and meaning made clear
and definite in order that any other use of these signs is pre-
vented. Arabic and Persian texts cannot be represented suit-
able without diacritical marks, but to use them with different
signification is unjustifiable. The English usages of certain
letters or their combinations in particular contexts cannot be
ignored. The tendency created in the public mind by their
constant use is not likely to be easily effaced. It is true that
the choice of signs in these individual efforts of transliteration
will frequently conform with signs determined by non-phonetic
considerations. Many phonetic inexactitudes will thus enter
in the script. It is, however, hoped that the influence of a
system of phonetic script will play an increasingly important
role and ultimately remove all divergences gradually. It is not
our intention to examine individual systems or to suggest de-
tails for an evolution of a system for transliteration. Perhaps,
it would be useful for ready reference to repeat the points
determined by the Copenhagen Conference1 for a suitable
system of transliteration. Such a system, according to the
Copenhagen Conference, should provide for:

(a) Quantity of length.

(b) Stress.

(c) Tones.

(d) Syllabic and non-syllabic sounds.

1. For detailed comments on all these points please refer to
"Phonetic Transcription and Transliteration"—Proposals of the
Copenhagen Conference—April, 1925. Oxford University Press,
Oxford, 1926.
(e) Voice and voicelessness.
(f) Nasalization.
(g) Labialization (lip rounding and unrounding).
(h) Denticals.
(i) Retroflex or cerebral, cocuminal, superdental or inverted sounds.
(j) Palatals.
(k) Palatalized sounds.
(l) The ‘sh’ sounds.
(m) Fricatives (spirants).
(n) Velar and post velar sounds.
(o) Glottal (laryngeal) sounds.
(p) ‘r’ sounds.
(q) Affricates.
(r) Non-exploded stops.
(s) Clicks.
(t) Vowels.

Some of the exhaustive grammars of Persian and Arabic languages have suitably and efficiently discussed the origins of sounds and the relative values of the alphabetical signs. A careful study of these observations with an eye to their practical utility will surely enable oriental scholars to devise an appropriate system of transliteration. The main difficulty, however, lies in their tendency to rely solely on the efforts of occidental scholars. It is only the increasing self-confidence and the spirit of self-reliance of oriental scholars that will finally lead to a correct solution of the problem.
TRANSLATION

Translations generally serve some utilitarian purpose. They are sometimes made word for word, and sometimes sense for sense. A purely technical or artistic bias on the part of scholars is often responsible for making them either too literal or unduly rhetorical. The former are too lifeless and tedious to comprehend; the latter, too much exaggerated and inflated. The mechanical method of literal translation fails to render a given passage into another language with the force and spirit of the original. On the other hand, no translator can import the original life and effect into his translation, unless he has thoroughly identified himself with the subject-matter of the original.

It may perhaps be a bold, though quite a welcome, performance, if a translator succeeds, with his consummate art, in offering an adequate interpretation of the original, thus making the nearest approach to the author’s mind. Such a translation is indeed invaluable, if not ideal, from the literary point of view. It may also become popular. This method of translation, however, is apt to prove an imperfect one, because it is characterized by an inherent tendency towards strained interpretation and ambiguity of expression. This defect is further aggravated by the subtle danger underlying the presumed identity of the ancient writer and its modern interpreter, which is the very basis of such a translation. To use our own standards of taste, style and morals in the examination of an ancient or historic text is unwarranted and unscientific. At any rate, the subject-matter and the text of an inscription are not such as will permit of a free-hand translation of this kind.

Another kind of translation which has influenced more or less the English renderings of Persian and Arabic texts by foreign writers displays neither scholarly acumen nor scientific accuracy. The real execution of these renderings was accom-
plished by Munshis who had less regard for historical research and lesser still was their solicitude to recognize the baneful effects of their uncalled-for omissions and commissions. It is, however, a fact that even these defective renderings have become palatable, owing to the artistic and literary flavour infused in them by the veteran foreign writers. The influence of this kind of translation is sometimes injurious to the honour and self-respect of the people whose history forms the subject of these translations. Some of the translations further set a mischievous fashion of artificial elegance in matters requiring exact scholarship. These may possess the merit of being agreeably perspicuous and impressive, but they are sometimes capable of bringing the people and their culture into ridicule.

Translations failing to convey properly even the substance of the original, and bristling with endless confusion in the transliteration of proper names, are not rare. This unhappy style of translation has created many misunderstandings and errors. Fortunately, however, the translation of inscriptions is in the hands of research scholars of undisputed literary accomplishments, and has thus escaped the confusion noticeable in other styles then current.

The correction of the original text, because it does not display the desired scholarship or correct view-point, is untenable. Moreover, the inscriptional records by themselves do not furnish any grounds for supposing that they were unsoundly edited or inadequately expressed. Few deviations could creep into these records, as the subject-matter of the inscriptions was generally prepared with particular care before it was skilfully incised by a scribe of acknowledged experience and workmanship.

Translation widens the field of the use of a source. The wider the area covered by the medium of a translation, the more extensive is the field of its use. In India, English is recognised at present as the lingua franca. Its use extends over countries of the British Commonwealth which are all interconnected. The material made available through the medium of English thus exercises its wholesome influence on the minds
of the foreigners compelling them to correct their prepossessed bias. Hence, the more we examine our history from the national point of view, the deeper are we convinced of the need of acquainting the foreign historiographers with the realities of the past. In Indian history this medium plays an important part, because it not only secures the widest possible field for the use of the historical source-material, but it serves as a corrective for the misunderstandings about the Indian people prevailing among the foreigners.

However, although the medium of English opens the widest field for the use of historical sources, it is inadequate to convey the exact meaning of the words and expressions in the Oriental languages with all the conceptions and traditions behind them. Mere literal translation with blind adherence to the explanations or meanings given in an antiquated dictionary is not sufficient to portray accurately the mind or sentiments of a writer as reflected in a source. Sometimes such a literal translation proves both misleading and derogatory to national honour. The English language and the Oriental languages stand on different cultural backgrounds. Customs and manners no less than social intercourse govern the conventions of a language, and if these differ in the countries of their origin, the conventions also are bound to differ accordingly. Thus, owing to the difference in linguistic conventions and dissimilarity of culture, the English language cannot serve as a natural medium affording facilities for a perfect translation. On account of this deficiency it is all the more necessary for scholars to exercise special care to avoid the pitfalls consequent upon the use of this medium.

A pure and literal translation of conventional terms not only presents a ridiculous picture of a person or event, but it directly exaggerates the circumstances, which place the reader definitely on the wrong tract and unnecessarily create an incorrect and biased impression of the people of the country. The word 'slave' or 'humblest slave' in the translation will never convey ordinarily to the English reader its intended significance of a mere subordinate officer or a servant or an
employee! It sounds absurd when one meets with in a translation a 'commander-in-chief' of a village or town forming the smallest part of a big kingdom or an empire. The translation of the term 'Sar-lashkar' by 'commander-in-chief' is also not borne out by the administrative system of the time. It is true that civil, criminal and military administrations being separate in the present system of government, terms appropriate and equivalent to the older designations are not obtainable for expressing the real sense, magnitude of power, and perhaps jurisdiction. It is hardly correct to designate 'Fauzdar', 'Havaldar' or 'Subahdar' of a town, taluka, or mahal, as 'commandant of police' or 'governor.' These terms are so variously translated that it is quite difficult to imagine them as having synonymous value. No comparison of these offices can, therefore, be judiciously or correctly made. The translation of these designations without the requisite knowledge of the administrative system concerned, or without regard to their comparative status expressed in the original, is dangerous. It is safer to leave them untranslated. Another important question requiring serious consideration is: Are all the titles affixed to the names of persons valid and expressive of the relative recognized official position of each person? If they are self-assumed or added as eulogies by zealous adherents, their translation with capitals on the presumption that they are titles is of doubtful value. The disparity between the mention of the prime minister of Aurangzeb, Asad Khan, without a title and the mention of a Havaldar of a small fort with a long train of these titles or eulogies cannot fail to impress on the reader's mind the unreality of these titles. The necessity for drawing a marked distinction between poetic flashes or eulogistic and unauthorised titles and the officially recognized designatory titles cannot be less emphasized. Even in the officially recognized titles the disparity in the significance of titles is great. It is difficult, though easy to understand, how Aurangzeb is referred to in the inscriptive records hardly with a title, while the later Moguls are mentioned with a long train of these titles. Therefore, any attempt to magnify
the titles by special translation does injustice to the emperors who exercised real power and kingship. Some means must be found to regulate the degree and manner of prominence to be given to the titles. Thus, the responsibility thrown on the translator is very great indeed; but it cannot be avoided in view of his important mission which requires him to acquaint the foreigners with the realities of the national life. Further, detailed examination of the ordinary text is the province of scholars in linguistics. The use of words in a literal translation inconsistent with the real sense and sentiment conveyed, has to be discarded if the unreal distortion which now pervades our history is to be removed.

One cannot deny the fact that, in translation, readers expect to be informed of the substance of the original, strictly in consonance with the sense, sentiment and terms of their own medium of understanding. A translation should supply the substance, with all the details of the original, in words expressive of the conceptions and conventions behind these details. At the same time, the facts in the text as understood by the translator, conventionally and not literally only, are to be transmitted through the translation for being easily grasped by the readers. In historiography, the presentation of facts in their true essence and aspects is of real importance. Mere literal translation of words is not helpful unless these words have equally distinct and appropriate values. It should be noted at the same time that spoken languages have a progressive, though slow, tendency towards amplifying and changing the meanings of words, as also for attaching new meanings to them. Such a tendency is generally commensurate with the cultural and scientific progress of the people speaking these languages. In the same manner, the political vicissitudes of a nation bring about a considerable change in the customs and manners, and compelling the adoption of new usages of words, not to say direct importation of foreign words. Though a fossilised dead language does not now undergo changes in the manner of the present-day spoken languages, a close study of this language reveals the fact that in no period of its history
its vocabulary was constant and permanently fixed. The meanings of words in the dead languages, as recorded in the pioneer lexicons, need not be looked upon as authoritative in every respect and for all time. This remark is particularly applicable to words pertaining to administrative appointments, revenue collection, commercial transactions and the like, which underwent changes with the advent of new types of political rule. If a translation is to portray a true picture of the past, it must convey the sense of the text and not merely the literal meanings of words. It is further advisable to translate designatory terms only when it is possible for the translator to indicate properly the relative position or status of the persons holding these designations. If this is not possible, any attempt to explain these terms otherwise has no real value.

The object of the foregoing discussion is to show that the literal translation of historical sources is not effective for the purpose intended. The translation of titles and designations is misleading. Any explanations of the terms expressive of designations and titles may be given in foot-notes for the use of linguists. Conventions of one language should be transmitted in terms of the conventions of the other language and not by explanations. Eulogistic terms should be distinguished from titles. In short, every care should be taken to ensure that the culture of the people is not brought into unnecessary ridicule or considered inferior, unless the realities of the situation deserve an exposure of this kind. The freaks and fancies of individuals are no criteria for the condemnation or otherwise of a particular form of culture.
KINDS AND NATURE

The sizes of stone-tablets, the kinds of stones used for engraving inscriptions, the manner of their fixation and the locations assigned to them in structures, as also the art of engraving used in these inscriptions, are themselves instructive of some aspects of the social and artistic life of the country. However, without a personal inspection and study of the tablets on the spot, any deductions drawn from the published records would hardly acquire any instructional value. The art and skill exhibited in the epigraphy, the talent and dexterity shown in the composition of the inscriptive texts, the use of varied styles of calligraphy, and the different usages of words—all these afford a considerably interesting and valuable data pertaining to the various auxiliary sciences contributing to the history of our cultural progress. The published facsimiles of the various inscriptive slabs present ready material for such a composite study, which needs to be made from the linguists’ and epigraphists’ points of view; and I feel no doubt that these scholars will attempt it in greater detail in the interest of our national history.

The stone inscriptions may be divided broadly into five kinds:

(a) purely religious,
(b) personal,
(c) edictal,
(d) commemorative and
(e) indicatory.

The locations at which these slabs are found fixed or inset are: religious resorts; palatial and charity buildings; tombs; bastions, walls and gateways of forts and fortresses; places of water supply; pillars or stone-columns and bridges. The religious inscriptions are full of quotations from the Quorān.
which are more or less of the proverbial variety. These quotations cannot be taken as illustrative of a very wide variety of subjects, neither are they, by nature, really representative of the vast treasure of philosophical and theological literature produced by the great and renowned scholars, poets and philosophers of the Islamic culture in the past. These quotations are also found in larger numbers in mural decorative designs on religious buildings. They are painted beautifully and with exquisite skill with the special advantage of having select coloured backgrounds. Inscriptional tablets of purely religious character are very few in comparison with the number of the Qurānic verses in these mural decorations. In the inscriptions on mosques, idgāhs, shrines or dargāhs, tombs, magic-houses, and such parts of these buildings as are not likely to be desecrated by being trodden upon, the Qurānic sayings are engraved. Particularly the later tombs, as a rule, have decorative designs and writings depicting the religious sayings and beliefs of the people. These writings serve as prologues to the main subject-matter of the inscriptions. But these prologues contain very few ‘praises’ and ‘commands’ of the Prophet. In these prologues of inscriptions on the Assembly Mosques, a Qurānic command is generally quoted to the effect that, whoever builds a mosque gets a dwelling-house in heaven. This command bears a striking similarity to the Hindu sayings often quoted in Hindu inscriptions on buildings of all kinds. It is interesting to note, however, that nowhere in these Muslim inscriptions are quoted any sayings in support or justification of the construction of such buildings by the demolition of structures sacred to the believers of other faiths.

The inscriptions on religious buildings except the tombs and grave-stones have a tendency to record the time of their construction in broad terms only. They record hardly any other details than the name and father’s name of the builder, and the name of his master or that of the reigning king. In rare cases, designations and titles of persons are mentioned. The inscriptions on tombs, shrines and grave-stones usually record the date of the expiry of the person entombed and also add
some definite information regarding his birth, regime, etc., which helps historical research. The religious inscriptions show a general tendency to record either the year or date of completion or the time, or more often, the year, in which the tablet was incised.

The personal inscriptions are more of a votive, dedicatory or donative nature. Their main intention is to commemorate the personal benefaction in the construction of structures rather than to record events. Here also, the dates recorded are in broad terms only. The names of the builder, his master, and the reigning king are mentioned. In a few cases, some more information as regards any connected event or the past condition of or repair to the structure is added. Only as an exceptional case do we meet with an inscription in which an episode is given with some detail. The designation of the builder is generally recorded.

The edictal or donative inscriptions are very few indeed. These contain official orders, orders of specific endowments, and the like. They are particularly important because they are definite and precise in their purpose and also in their circumstantial details. Being official documents, they have great historical value, but its usefulness is limited to the orbit of local history.

Memoirs or commemorative pillars are of special value and of definite importance so far as the particular events declared therein are concerned.

There are very few instances of indicatory inscriptions which have attained any inscriptions value. Only one boundary stone and one pillar are the rare specimens of this kind in the Epigraphia Indo-Moslemica.

The Persian and Arabic or rather the Muslim inscriptions are not generally informative. They tend more towards personal glorification than towards recording personal details and merits. They are not very particular about definite time indications. Only in a few cases, have genealogies been given, but this course appears to be an exception to the common practice, and perhaps it is an imitation of the Hindu system.
especially because such exceptional inscriptions are to be found in the Deccan and Gujarat, where the Sultanats admitted marked Hindu influence. The commemorative tablets, relating to the invasion of Khandesh and the Deccan by Akbar, do not seem to have any parallel elsewhere in the Muslim inscriptions. Perhaps, these show how Akbar had reconciled himself to the Hindu culture by adopting what he thought best, socially and politically. A comparative study of the kinds and nature of the Muslim and Hindu inscriptions will undoubtedly reveal how the intermixture of the Muslim and Hindu administrative systems led to the progress of both.
DIRECT AND INDIRECT VALUES

The value of a historical document is assessed by four different tests:

(a) determining the reliability of a document by its inherent quality;
(b) resolving the degree of truth of a document by the nature of its evidence;
(c) fixing the degree of utility of a document in accordance with its contribution towards historical reconstruction; and
(d) regulating the place of a document among national sources of history by its capacity to throw new light on the different aspects of national life in the past.

Every document is subjected to all these tests, and the cumulative effect of the application of these tests influences, expressly or otherwise, the reconstruction of our history. The process of determining this value is not very elaborate or complicated, but without subjecting a historical document to the above tests, its real use and value cannot be fully explored. The foundation of all these tests lies in the information previously made available, directly or indirectly, with regard to the subject-matter of the document.

Stone inscriptions were in the past the only powerful and serviceable medium through which monumental deeds were commemorated or proclaimed to the public. However, with the advent of the modern press having capacity to multiply any text to an incalculable extent and to perpetuate it, the use and importance of these inscriptions have gradually diminished. The influence of this ancient institution still persists throughout the country and tablets continue to be fixed on monumental buildings. But the attraction of public attention and curiosity towards these modern tablets is so slight that these ins-
scriptions are becoming increasingly rare and shorn of details. However, in spite of this gradual disuse of stone inscriptions, its value and importance as an original contemporary record remains undisputed. Very few instances of copies of stone inscriptions are extant. The existing specimens of these copies are, however, restorations of the age-worn or deteriorated tablets rather than copies as such of the originals usually made for other purposes or with any ulterior motive. These copies have not, therefore, lost much of their original use and value. These inscriptions are more of a proclamatory character. Except in a few cases of inscriptions containing orders, endowments, and edicts, they possess no qualities of a deed or legal document reserving or affecting any right of possession, ownership, agreement, contract, etc. Even the inscriptions containing edicts, orders, etc. are no more than mere authorized copies. The peculiar nature of inscriptive writings excludes any possibility of their admitting any spurious matter. The exposure of these inscriptions to the public eye, which is the main aim in the fixing of stone tablets, has effectively discouraged the intrusion of any spurious matter in them forever.

In the reconstruction of ancient Indian history, the inscriptions play a very important role, as they provide a sure basis for every line of research connected with its past. They regulate everything that we can learn from coins, architecture, art, literature, tradition, or any other sources. The reasons why these inscriptions are so valuable in India are:

(a) they fill the void caused by the absence of historical narratives;

(b) they are found in large numbers covering a wide area;

(c) they bear dates and contain precise matter; and

(d) they have an important bearing on the study of Indian languages and dialects.

It should not, however, be forgotten that the inscriptions were not incised with the express object of recording history, but in order to stress the importance of everything connected with
religion, and to secure perpetuity to the name and deed of the person who caused the structures to be erected or financed.

The historical evidence recorded in stone inscriptions satisfies an important test, inasmuch as the public of the time has had an opportunity of verifying the facts and contemporary beliefs contained in them. Such portions of them as record personal intentions and direct statements are, therefore, perfectly authentic. Any other information incidentally disclosed or explained by way of cause or effect relevant to the deeds announced in the inscriptions is bona fide, even if it is not accurate or corroborative. So, unlike other documents, all the contents of a stone inscription have a first rate evidential value. This does not imply that these insciptional writings are free from mistakes of understanding or wrong usages locally current. In fact, we often come across, in them, miscalculation of dates or incorrect mention of titles. These slips, however, are themselves indicative of the beliefs and practices of the local gentry as testified by the writer or the person responsible for the inscriptions. The stone inscriptions are, therefore, publicly testified documents affording evidence of a contemporary character connected with a local event.

Any direct evidence deduced from genuine documents is ascertained historical truth; indirect evidence surmised from them is circumstantial proof or possibility and that suspected to exist in them is probability. A factual truth is self-evident; a possibility is dependent for its confirmation on some other direct evidence capable of filling up an unconfirmed gap in our knowledge. A probability indicates a gap but not its exact nature. In the study of documents, a searching scrutiny has to be exercised for ascertaining these three types of evidence. If none of these types of evidence is procurable, the value of the document is practically negligible; and thus the inscription or a document loses all its importance as an effective instrument of historical reconstruction.

The Arabic and Persian inscriptions generally contain direct evidence in regard to:

(a) the structure on which the tablet is fixed;
(b) the builder or the officer who directed the construction of a building;
(c) the superior officer directing the construction of a building or patronizing the builder;
(d) the reigning king; and
(e) the time about or by which the structure was completed.

Some inscriptions go much further and announce:

(a) the greatness and importance of the building;
(b) the social and political status of the builder;
(c) the social and political status of his superior officer or patron;
(d) glorification of the reigning king;
(e) some pedigree or dynastical details of the builder, patron and the king;
(f) event or events connected with the builder and the building; and
(g) time limiting such events.

The indirect or circumstantial evidence which may be obtainable from the inscriptions decides the possibility of:

(a) the effects or influences of the deed recorded;
(b) the influence or the sphere of moral or political authority or jurisdiction of the persons mentioned,
(c) the relation of the person or persons with their social surroundings, with their own local status and connections;
(d) confirmation of other deeds or events dependent on or inter-related to them; and
(e) the time sequence in the normal chronological order.

The probabilities are concerned generally with such missing links as cannot be supplied by either the direct or the indirect evidence available.

The degree of utility of sources is determined by the extent of their use. The inscriptions, which do not go beyond narrating the story of a structure and that of a person with scanty details about his status, are of limited value as public
interest in them is confined to the history of their particular places or localities. Inscriptions having a wider scope but restricted to dynastic or sectarian details have also limited use and interest. The inscriptions under these two categories by themselves are not helpful in the reconstruction of national history to the same degree and extent as those which describe a person or event of any political or territorial importance. Generally, the inscriptions do not record elaborate details of persons or events. Their contents are limited to the mention of the person, the deed and time concerned. The value of these contents is, therefore, governed by chronological sequence, and unless an inscription has a special bearing on the ascertained time-limits of personal regime or the length of an event, it possesses no effective value as a historical source. A large number of inscriptions mentions the reigning kings; but, unless they are helpful in either extending or limiting the regnal periods of these kings, their value as historical source is considerably diminished. These remarks are equally applicable to inscriptions mentioning historical personages. Both these types of inscriptions, however, retain their importance and use for local history. As every stone inscription possesses the value of an original and genuine document, its assistance in confirming the evidence of similar inscriptions is of no consequence. The only value these inscriptions retain is that of determining the sphere of influence or jurisdiction of persons mentioned; but even this value reaches a negligible point, unless different spheres of influence or jurisdiction of different officers are noticed in them. In short, multiplication of evidence furnished by inscriptive records is not helpful because of its common mould and limited details.

The last test is applied primarily to determine the comparative or relative importance of a source and secondarily to ascertain the real motive of the author as expressed by the details. The rarer the information available in a source on any point of history, the higher is the value assigned to it. Multiplication of sources of identical type lessens their value and diminishes their use individually. It is not only the kind
or nature, or even the details of a source that lend importance to it, but it is the absence of similar information or its indefiniteness in analogous sources that heightens its use. A source of a confirmatory character does not attract the same eager and earnest attention of a research worker as he bestows on a source disclosing a new fact or making some addition to the existing knowledge. However, in certain confirmatory sources, the dissimilar nature of authenticity is recognised to possess some importance. Once certain details are known, their mere repetition under like conditions of authorship, locality and influence becomes a matter of neglect. The information elicited from a source is assessed to be of first-rate importance if it is contemporary and new, or if it amplifies, corrects or revises the knowledge ascertained from another source of the same importance. Any contemporary text recorded or quoted in a later source, if corroborative, is to be considered of second-rate importance. The information from non-contemporary sources, or based on hearsay reports, or of the nature of suggestion, is of third-rate importance.

A further test in the evaluation of sources is to determine the comparative significance of etymologically similar expressions. The words or terms used to indicate positions, offices, etc. do not bear the same significance at all places. The background on which these terms appear determines the degree of their relative importance, e.g. the office of a Diwān of a petty state is not comparable to the Diwānship of a large state. Two apparently similar events cannot be said to possess equal magnitude and importance. The conditions or circumstances in which an event has happened, and the magnitude and extent with which it has effectively spread its influence, are the sole considerations in determining the comparative importance of terms expressing offices and events as indicated above, and also in assigning an appropriate place to the relevant source in the reconstruction of our national history.

All inscriptions must undergo these varied tests before they are used. In practice, this process is easy and natural enough. The simultaneous application of all these tests finally resolves
the respective and appropriate place of each source with regard to its varied uses for historical purposes. To fix up the stage at which the weeding of useless material should commence is a problem, the solution of which entirely depends upon the state of perfection reached by the reconstruction of our national history. Personal needs and opinions should not weigh in the determination of this important problem.
APPLICATION OF EVIDENCE

It is now being gradually realized that the field of history is a very wide one, and that, if we are to understand the past, every fragment of evidence bearing on it must be studied and made to tell its own story. Every tablet, every fragment of ruins, every piece of historical material, is a portion of contemporary life solidified, condensing so much will, so much labour and so much living reality of the time. Every document, whether a contemporary inscription or an epistle, or a later record of observations, traditions or legends is a witness competent enough to be admitted for its evidence towards historical reconstruction. There is no disqualification for such a witness; the rules of exclusion of evidence, normally exercised in law and legal courts, are not recognised in historical research. No student of history is, therefore, justified in dismissing any evidence without due cognizance or record, simply because it discloses no useful information for his individual study.

Historical evidence is any fact presented to the human mind which has the value of correcting, corroborating, justifying, interpreting or amplifying our knowledge of the past. In history there is no absolute certainty of facts. Even an ascertained historical fact is at best a belief of the individual witness. Every human belief, though amenable to reason, is inherently arbitrary. Indeed, most of our cherished beliefs are founded on traditional or external knowledge or sentiments transmitted to us by our predecessors. The beliefs prevalent at a time are often challenged by other beliefs founded on newly discovered evidence. It is true that beliefs deeply rooted in the popular mind cannot be easily disconcerted owing to the faith and sentiment that has grown round them since their inception. Nevertheless, the human mind has shown its readiness to renounce its fond beliefs and sentiments whenever tangible
evidence about their fallaciousness was produced and convinced it of the necessity of such renunciation. Thus we arrive at the three phases of historical evidence: (a) possibility, (b) probability, and (c) speculation.

History deals with individual facts. Wholesale generalization is not within its scope. For a logical conclusion, two or more analogous facts are required, which possibility is most rare in historical evidence. The principles underlying the admission of evidence for a logical conclusion are thus wholly inapplicable to history. Logic aims at a conclusion irrespective of the quality, nature and use of the evidence, while history relies on the conversion of evidence into facts without any necessity of finding a parallel for their confirmation. The principles of admitting evidence for historical investigation also differ from those accepted in law or science. The law aims at a decision, the science at a result. Fundamentally, therefore, the objects underlying history are different from those underlying law or science. Any limitation in the admission of historical evidence is impracticable, if not imprudent, as it is tantamount to rejecting all the testimony available. No formula or means can possibly be evolved for testing the credibility of the inconclusive evidence of history as it is possible in science. In history, therefore, evidence can be rejected only if the material or evidence sifted indicates no certain result. The basic principles for the admission of historical testimony are, therefore, dependent on the following considerations:

(a) Human action cannot be repeated for verification.

(b) Statements describing facts or actions are available, but not the facts or actions themselves. Only a judgment, whether and how far these statements are true, can be formed with some scientific clarity, but this does not necessarily mean truth.

(c) It is possible to elicit the truth of a statement about a specific historical fact or facts, but not the truth itself.

(d) All historical research leads only to probabilities and nothing beyond them.
(e) The hidden motives behind human actions do not permit of our defining the causes governing the trend of individual actions, national sentiments or national enterprises. Hence, any generalizations, however interesting and valuable, must be kept distinct as speculations. They should on no account be counted upon as certainties in view of the endless complexities of human nature governing such actions.

The general principle should, therefore, be to admit any evidence that may be presented or discovered for study. Whatever conclusion we draw should have scientific clarity, but it is not necessarily an irrevocable truth. The principles of human psychology as evolved from the experiences of the past should support the discretion we exercise in sifting of evidence. The relations of both actions and results determined in point of space and time should be our main criterion in scrutinizing the evidence. It is also necessary to avoid such defects as duplication, inconsistency and impossibility in the formulation of historical evidence. The influences or motives leading to mutilations or deliberate fabrications, prejudices true or false, passions of love, revenge, and the like, should be guarded against while using any piece of historical evidence. All possible care should, therefore, be exercised in finding out the reliability of the informant, in detecting his motives and in ascertaining the manner and means used by him in the presentation of his evidence. In fact, no historical evidence is either truth or falsity; it is merely a report gathered, correctly or loosely, by an observer, not necessarily a critic. Generalizations are not probabilities but inferences, or rather individual tendencies. These generalizations especially when they bear on the political and social sides of human life possess, no doubt, the quality and power to guide the succeeding generations whose conduct and actions are often moulded by the experiences and experiments of the historic past.

The application of evidence from historical sources to the composition of historical narratives has assumed a notorious significance in India. The history of warring groups of dis-
Similar origins is at present used as a common stock of knowledge by these groups who still maintain their existence as separate social and religious units although their unification into a nation is now an indisputable fact both politically and territorially. It is, therefore, not a simple problem to weld together our experiences and experiments in the political and social life of the country so as to form a common cultural and political basis which should be not only conducive to the national advancement but satisfy the individual aspirations of the groups concerned. This problem is rendered still more difficult, especially because even these warring groups were not unmixed opposing parties. Not a single important event can be pointed out revealing a complete distinction, either religious or cultural, between the politically opposing groups. In the same manner, the springs of political action of any group cannot be attributed either to the leader or to his followers. We often meet with instances in which the leaders and their followers represent different religious and social units striving for political supremacy and actuated by personal ambition irrespective of their religion. Even a casual survey of past political actions reveals diversity of interests of the opposing groups. These interests had twofold outward appearances, and, consequently, the political actions were more of the nature of a civil war than of a war for religious aggrandizement. Thus, the historical evidence is saturated with such diverse information that an attempt at a rational reconstruction of our national history becomes extremely difficult. The actually opposing groups were not harmful to the upper levels of society and he masses, as they showed no clear intention to organize group leadership among the settlers of the land on a religious basis. The attempts made in the past in the application of historical evidence to the composition of historical narratives are found defective and have not always been borne out either by facts or evidence. The tendencies towards omission, perversion, correction, justification, digression and misconstruction, either deliberate or otherwise, are easily discernible in historical narratives. The causes assigned to past events by chroniclers are
often farfetched and inconsistent. They are more expressive of their individual mind than of contemporary facts or conditions of the people and the country. The chroniclers seem to have been so much obsessed with religious fervour and racial superiority that their overzeal in expressing their gratefulness to their patrons never allowed them to use their impartial judgment in favour of the nation as a whole. Although they had access to the historical material acquired through tradition and official records, they seem to have made up their minds solely to record only the praiseworthy acts of their patrons at the exclusion of any reference to their blemishes. Thus the element of distortion admitted in history is so great and deeply rooted that even scientific application of new evidence to the reconstruction of history has become a very difficult problem requiring very strenuous efforts for eradicating effectively the corruptions already extant. Taking stock of the merits and demerits that characterize our past historical writings, we cannot but recognize the following facts:

(a) Before the middle of the eighteenth century the country was invaded by people with the intention of settling in the land.

(b) As soon as the invaders had settled, they developed such attachment to their new home and brotherhood for the people around them that any further inroads by succeeding invaders were stoutly resisted by them along with the settlers who had been previously subjected by them.

(c) Both the invaders and original settlers had adjusted themselves to the local conditions and continued their existence as one social unit and political group for centuries.

(d) The British system of rule was based on principles altogether different from those of other systems in India.

(e) The British, though they adjusted their administrative machine to the new surroundings, never made
any effort to assimilate themselves to the Indian life and culture, but on the contrary, they devoted their attention to keep their countrymen isolated and aloof from their contact with the people of the land.

(f) The British had to change this angle of vision after the first quarter of the nineteenth century.

(g) The isolation and aloofness enforced on the Europeans was further deepened by superior treatment leading to a superiority complex.

Once these facts are recognized, no comparison between the British and the Moghuls as invaders can be instituted, and any attempt to base the interpretation of any historical event on such a comparison proves futile. The application of evidence should, therefore, be so regulated that a correct picture of the times and conditions actually prevailing at the time is easily obtained.

In view of the background sketched above, the evidence discovered should be so applied to the reconstruction of history that it proves effective in its use and purpose. The tendencies towards omission, perversion, correction, justification, digression and misconception must be avoided in future. There should be no discounting of original contemporary evidence, simply because it does not fit in with the already recorded accounts in the historical books. Events newly discovered, even if they conflict with the current framework of history, must be recorded. Any new departure from the known details in history when noticed should not be disregarded, and no tendency should be entertained towards correcting it or adjusting it to the details previously recorded with certain notions not conducive to national interests. Evidence newly found, though not in keeping with the assertions of the past historiographers should not be perverted but preserved intact. Events not reflecting any merit on a regime or a hero should not be omitted, nor should any justification for them be attempted with a view to make them less blameworthy. Misconstruction of historical details is always harmful to the cause of national history
and must be guarded against. The life and culture forming the background of historical events should not be judged by the modern standards, as such a course is sure to create a wrong historical perspective. It is, therefore, essential that before application of any historical evidence to a specified period of history we form a general idea of the contemporary people and their surroundings.

The importance of historical imagination for visualizing the currents of history cannot but be emphasized. However, the assumption of these hypothetical currents as final verified theories or results needs condemnation. Progress of scientific research is due largely to provisional explanations suggested purely by imaginative intuition. Such explanations have, however, to be consistent with the facts previously recorded and must be strictly based on the principles of the science of history. In the earlier stages of historiography, some hypothetical data has to be accepted for the reconstruction of a story, but as soon as fresh material is obtained, this data should be purged of errors and carefully filtered so as to represent genuine facts. Thus even the play of imagination has to be restricted to the general trend of the popular mind characterizing a particular age of history. Explicit self-contradiction must be avoided. Imagination inherently possesses the power to probe into the depths of reality and, as such, it is a very potent factor in all historical research. The importance of guess-work in the process of historical reconstruction cannot, therefore, be undervalued or labelled as 'deliberate mischief'. What is blameworthy in the guesswork is the obstinacy to adhere to it even when it is proved to be a misconception on the strength of reliable evidence. In some cases, no doubt, the hypothesis postulated proves to be so real that every new piece of evidence brings it into complete historical relief, as though the guesswork had converted itself into a historical belief. In the primary stages of historical research, our ideas about striking historical events are within the orbit of practical possibility. Even in the application of a new piece of evidence, certain links are to be assumed to make it fit in with the facts previously discover-
ed, but this assumption does not mean that all links are incontrovertible facts. Therefore, in the application of a new piece of evidence, we have first to add it to the existing facts, and then to see what amount of guesswork has to be confirmed or abandoned and what amount of new guesswork has to be inserted with a view to supply new links.

The question of the use and degree of discretion to be exercised in the application of evidence is also an important one. This discretion is not to be exercised in the reconstruction of a story but in the selection of evidence. All evidence of first-rate importance has the right to go in as it is, but that of second-rate importance should not affect the former or its bearings on the reconstruction of the story. The evidence of third-rate value should be admitted for corroborative purposes only and should not be considered by itself sufficient for proving a fact. Any evidence, though contemporary, need not always be assumed to possess first-rate value, unless its contents and circumstances warrant such an assumption. Any misunderstanding on the part of an author of a contemporary source makes it liable to be rejected. At best it may be taken to represent the then current belief.

In short, every piece of evidence discovered should be recorded for the reconstruction of national history and use in its proper perspective with due regard to its reliability and importance. In historical evidence, the process of the weeding out of the material should be resorted to with great caution. No economic considerations should weigh against the preservation and utilization of the old records. The disastrous results of such considerations had often to be greatly regretted by scholars even in the advanced countries like Great Britain, America and France.
NAMES AND TITLES

The origin of the custom of naming persons or places for distinguishing them from one another was simple in conception and purposeful as well. As time went on, the number and variety of names which could be conceived for this purpose fell short of the requirements, and various other expedients had to be found to make this deficiency. Father's name or the name of the place of origin was added to the personal name to multiply the number of names required. With the increase in population and the growing concentration of inhabitants in towns and cities, a further need for distinguishing between these names arose and it was satisfied by the use of surnames, second and third surnames and professional names. Even then nicknames derived from particular parental attachment or official status or from some mental or bodily defect or a striking peculiarity had to be used for easy and simple distinction. Apart from these distinctive names and appellations, names characteristic of the nature, tendency or achievement of a person had to be adopted. Thus the complexity of human character and the varied human interests have introduced a variety in these names and appellations.

Titles are nothing but names indicative of greatness or eminence which gives distinction to a person in social life. These are the outcome of the deeply rooted human instinct for superiority over his confrères. The titles whether official or honorary, civil or military, temporal or ecclesiastical, are distinctive designations implying rank and dignity in the society and not always the offices or avocations of the persons concerned. There was no regularized system of determining and awarding titles in historic times. It was open to any person in power to confer any titles upon his favourites. The recognition of these titles always depended, first on the acceptance by the persons concerned, and secondly on the people of the locality in which
these persons lived, moved and had their being. As a matter of course, these titles lost all their relative significance and quality which determined the social or political standing of their holders. There was no limitation to the number of titles a person should enjoy, nor was there any system of precedence in these titles. The indiscriminate variety of these titles was a sufficient reason for their universal use as personal appellations. The natural human instinct for distinction, coupled with a tendency towards flattery for selfish gains, was particularly responsible for the wide currency of the titles and names.

A further complication was caused by the peculiar oriental custom of reciting attributes and using flamboyant styles of address with respect to a king. These are so extravagant in their variety that it is difficult to determine their nature and utility. Rival kings tried to impress on each other their own greatness by the recitation of a long roll of their styles of address, titles and attributes through their bards, heralds and ambassadors. The oriental imagination of secretaries and writers of these kings was thus exhausted in devising exaggerated and pompous attributes and styles of address for their masters. For this purpose every possible term expressive of flattery was laid under contribution, including even those lofty attributes of the Almighty. All this was the creation of the fanciful minds of the secretaries slavishly eager to display their literary abilities. These were conveyed in correspondence sometimes discreetly and sometimes indiscreetly. A king styling himself as the ‘king of kings’, or ‘the monarch of the earth’, is found at times offering terms of surrender or treaty; or the ‘Khān of Khāns’ asking for his release from exile, or a ‘Shaikh of Shaikhs’ entangled in an indiscreet action.

Honorific terms have now become stereotyped formulae. The words constituting them have lost all their significance and meaning. They are now more or less indicative of genders or suggestive of personal names. They have perhaps no more value than that of a stereotyped courtesy. They are, however, to be distinguished from such terms as possess a deeper
significance, originally derived from the idea of command, rule or birth.

In the Muslim inscriptions, the problem of names and titles is a most complicated and difficult one. Muslim officials or persons are mentioned either by their personal names, or as the son of so and so, or by the names of the places of their origin, residence of birth, or by the combination of any of these appellations. Two or more names of the same person are also met with. In some cases, the name of the master is added to the personal name as a distinction. Nicknames and such appellations as Muḥammad, Shāikh, Malik, Khān, Sultān are prefixed to personal names; but there are instances in which these appellations are in the form of surnames or even personal names. Names of saints are also added to personal names for honour and distinction. Thus, there are various ways of expressing personal names. Important persons are often addressed by their professional or positional designations such as Khawas Khān, Kamil Khān, Mustafa Khān, and these titles also appear as personal names. Although the necessity for combining father's name and place-name was universally recognised as a distinguishing feature, we often find that only personal names are mentioned. This varied use of names and titles has made the task of the identification of persons very difficult indeed.

Titles and honours were not regularized, nor was their order and significance fixed so as to indicate the respective social and political status of their holders. These titles appear to be more or less qualitative and thus expressive of the nature and scope of the personal exploits of the recipients. In the case of a king, the styles and attributes were the creation of the likes and dislikes of his secretaries or officials, and they have hardly any real value, because bards and officials had no sense for the evaluation of these styles and attributes with respect to the world around, and also because their patronage was often directly proportionate to the degree of adulation expressed in their writings. It is also noticed in these writings that the enthusiasm of these bards in praising their patrons is at its highest
when the real political power wielded by these patrons is at its lowest! Equal freedom was enjoyed by the sardārs and officials of these kings in receiving unrestricted adulation from their adherents. Such adulation is sometimes so extravagant that it exceeds even the praise bestowed on their patrons.

These extravagances have no intrinsic value as such, but they often cause confusion in the mind of the research worker, when he attempts the evaluation of his sources. This mischief is further aggravated when, as a result of this confusion, the researcher fails to identify even the real names of the persons concerned. In short, this confused state of names, titles, and attributes, makes it impossible for him to attempt successfully the indexing and consolidation of sources and greatly hinders the use of the historical material.

It is hardly a matter for satisfaction that even the names of persons and titles should have their exact etymology undetermined and unregulated. Normally every name appears to have some basic meaning or derivation from a word expressive of some quality, and hence there seems to be no reason why these names should be differently spelt or transliterated. It is hoped that a concerted attempt by linguists of this country will solve the problem more satisfactorily. It should not prove so difficult if it is handled by Indian scholars who alone are familiar with the use of the names and titles with all their connotations.
INDEXES

An index is a device through which the contents of a book are so analysed as to make them available for specific reference. The manner or system of this analysis depends on the use for which it is intended. The practical value of an index is being increasingly recognized with the growth of literature and the growing needs of specialized research. The real test of efficiency of an index lies in its capacity to make every detail available to the reader. With a view to ensure this efficiency, the different points of view of the readers must be fully considered in the planning of an index. Providing separate indices for the different parts of the work, as also the division of an index and its partial presentation is unscientific in conception and vexatious in its use. A complete index for a work or a completed volume of a journal is highly desired.

A table is a summary of details bearing on a specific subject or a topic. The functions of a table and an index, therefore, differ considerably. A table renders help to scholars in respect of a particular topic or subject in its entirety, irrespective of whether it covers a part of a volume or several volumes or a series. An index, on the contrary, is serviceable to scholars in their study of a volume or a work or a series without any regard to the subject-matter. Both these instruments of reference have their own importance and utility. An index is a final analytical compilation and allows of no further addition or alteration, while a table is capable of revision in the light of new information. A table to be completely analytical and useful needs to be indexed and annotated.

The arrangement of an index may be alphabetical, chronological or of any other type best suited for the purpose intended. No two systems of indexing can be combined without causing confusion and inaccuracy. The alphabetical indexing, besides being simple in execution, is convenient for
reference and easy to understand. It has naturally superseded other systems with some exceptions. An alphabetical index is popular because it provides a mechanical order and is capable of arrangement to any degree of depth required. Every alphabetical unit is itself a sub-division. The indexes are, therefore, a real help for study and the greater the accuracy and scope of details ensured by them, the more comprehensive is their use by scholars in their studies. An inaccuracy or omission in an index is likely to result in throwing into obscurity the subject-matter affected by it. Much of the value of an index, however, depends upon the manner in which it is printed. Every caution taken to ensure clearness of printing adds to the merit of the index and its subject-matter. In this scientific age, an index has become an indispensable adjunct of a good book. In fact, any book worthy of reference by scholars but appearing without an index is considered to be incomplete and hence loses much of its value and utility. All books of the nature of fiction require no index. A table of contents is enough for them.

An efficient and complete index can be compiled if the matter for analysis is clear and accurate; but the desired perfection cannot be attained unless this matter is properly and uniformly set forth. Ordinarily, alphabetical indexes of names of persons, places and objects do not present difficulties in their compilation. It is only when the subject-matter is combined with the name-index that the difficulty arises. In such a combined index the need for a precise treatment of the matter analysed is greatly felt. In historical works, names of persons and places are generally found to be sufficiently analytical to supply the desired reference easily and conveniently; but if these works are produced succinctly, precisely and systematically, the names of persons and places can be conveniently combined with such further details of events as are connected with them. But such an exhaustive index, however keenly desired, cannot be prepared with scientific perfection if its matter is not precise and consistent in its character. In such cases subject-indexes can at best be compiled on broader lines only. Separate
indexes of works like the *Epigraphia Indo-Moslemica* arranged according to periods, regimes or different dynasties of kings should prove useful in addition to the name and place indexes. In fact, any detailed analysis of the matter attempted in these indexes from different aspects of historical study heightens its value and utility. The more minutely we analyse our sources, the more effective are the results obtained. The nature of a work should, however, decide the exact system of its index. The material for indexes of names of persons and places is always definitely and correctly presented in books dealing with current topics. In history, however, the availability of correct material is rendered difficult because:

(a) different customs and practices were in vogue in respect of the use of various appellations and personal names;

(b) personal names have been spelt in different ways in ancient and historic writings and differently transliterated in the current literature and in chronicles of later date;

(c) the mistakes and misunderstandings of later writers have imperceptibly found their way in their treatment of appellations and names.

The only difficulty one has to encounter in indexing these historical names and appellations is to determine the changes they underwent in course of time. The main object of the index is to separate every individual item with a view to consolidate all relevant and allied information about it so as to make it a composite unit. Hence, it is essential to bring together all the appellations of one and the same person or place. It is thus clear how the varied treatment of these appellations and names now found in source books has made the task of proper and effective indexing very difficult. The sources published in the *Epigraphia Indo-Moslemica* offer perhaps the most typical difficulties of the kind likely to be experienced in these respects. With the multiplication of these difficulties the labour in indexing becomes almost fatiguing as
it involves the insertion of a number of cross-references and other details to remedy the defects of the original matter and to remove the shortcomings of the index consequent upon these defects. As an illustration of these difficulties, the diverse ways in which one and the same person is named may be pointed out. A person is mentioned either by his own personal name, or as the son of his father, or by his native place, or by the title attributed to his office, or by his profession, nickname or any other public attribute. All these appellations deserve specific entries separately by themselves in an index and at the same time they require to be incorporated under one name of a person or place commonly known. Once we accept that an index should serve as an easy guide to readers, it throws on us an obligation to think of the points of view and requirements of our readers. The readers cannot be expected to anticipate the exact appellation adopted by the compiler and to search for it in his index. Without telling them how to arrive at the exact appellation used in an index, it is practically impossible to direct the readers to the desired place. It thus becomes necessary to index all the appellations in their different forms as they occur and at the same time to cross-index them wherever required. Where multiplication of such appellations is unavoidably extensive, the economic and the best way from the points of view of both the reader and the writer would be to make separate entries of all these appellations and then to insert index details only under one appellation commonly known and to direct the readers to this entry with a note against all those separate entries in respect of the person or place or object. This complexity is further aggravated by the varied and divergent systems of transliteration and transcription. Such entries should also be entered separately, but these should be accompanied by an entry of the correct, appropriate and commonly used transliteration of the appellations.

Whether titles and attributes should be made a part of an index is a moot question. There is no doubt that when a person is known or mentioned particularly and exclusively by an attribute, its inclusion as a means of practical identity of that
person is essentially required; otherwise the mention of attributes and titles is unnecessary. Sometimes, however, for the purpose of distinction the mention of an attribute indicative of a distinguishing feature will be helpful.

The manner in which an index should be prepared requires some comment. It is a question whether the alphabet should alone form the criterion for the distinctive serial order of an index disregarding the special signs used in a transliteration, or whether the substitutes of these signs should be recognized as well. It seems desirable that signs such as hyphen and commas may be ignored in the order of an index, but they must be registered in their appropriate places. The diacritical marks which are combined with certain letters for giving them distinct phonetic identity should be retained in an index with all their distinctive features. It is true that omissions of letters consequent upon the use of diacritical marks will, no doubt, present some difficulty, as such use will result in two different spellings of the same name. It is, therefore, necessary to record separate entries for them in the index with cross-references to indicate that they relate to one and the same name. In the absence of any unified system of transliteration, there is no other alternative but to multiply such entries.

Whether such expressions as 'king of a country' or 'governor of a district or a town', without the mention of his name occurring in texts should receive a place in the name-index is a matter which requires some consideration. These professional designations have the same value as their names in such cases. Their insertion in an index, especially of a source-book with material of a varied nature, is equally helpful and important as the name of the king itself. Any omissions of such entries particularly in a book with detached sources, simply because they have no independent identity, will result in an unintentional neglect of the material.

We have also instances of sources in which an event is described in full but without a mention of the person or place concerned. Unless we find some means to make a reference to this event in the index, it remains incomplete. The only way
to get over this difficulty is to supply the missing names in the text itself, and to insert them in the index. Often while publishing sources this point is overlooked on the presumption that it is plain to an outside enquirer; but it must not be forgotten that an index is mainly meant for the unacquainted reader and not for the one who has studied the material. The circumstances in which an index is used by a reader do not allow time for a detailed examination or scrutiny of the material itself with a view to detect the passages for which no entries are furnished by the index. In short, the editing of a text should be so accomplished as to facilitate the compilation of an index with scientific thoroughness.

When separate identities of a personal name are established on the evidence of their place or time, such identities should be separately indicated in the index. But in cases of doubtful identities such separation of entries becomes difficult. It is not that place or time is always at our disposal for establishing these identities, and hence some other means have to be devised to distinguish these entries in the index.

It should, however, be remembered that although it is desirable to attend to the above details carefully, it is not always practicable to do so. For instance, it is not possible to anticipate the appellations that may be revealed with the advance of study and research. It may, again, not be possible to fill in names of persons or places in the texts in cases in which their identity has not been previously established. The principles of indexing discussed above aim at providing a scientific index, and although they are difficult to be enforced at all times, their neglect can by no means be justified.
INTRODUCTIONS TO INSCRIPTIONS
AND THEIR DETAILS

The skill displayed in the presentation of inscriptions and the method adopted in introducing them ensure a wider and more appropriate use of the historical evidence contained in them. The skill depends upon one's ability and artistic sense, but the method does not. In the absence of any methodical presentation, the inscriptions are bound to remain unintelligible and inexpressive of their significance and tale. The more we exert to set the text of an inscription into the framework of the known details of history, circumstantially related to it, the clearer is the manifestation of its inherent worth and quality. Our chief aim in the presentation of an inscription is not only to introduce it but to make it full of life and capable of telling its own tale. This tale is a truthful story as understood by contemporary persons of acknowledged status and responsibility.

Our immediate object in the presentation of historical material is that the scholars concerned should make the fullest use of the material in all its aspects and from all points of view. The more attractive is the presentation, the better the response from scholars. The detailed exposition of the usefulness of the material and its influence is a feature which convinces scholars of the scope and repurcussions of the evidence unravelled by the material. To expect scholars or historiographers to determine what best use they can make of the material presented by others is to narrow down the field of its utility. The results of our findings and the considerations that influenced our conclusions should prove helpful to other scholars and thus save their time and labour in treading the same ground over again. The requirements of historiographers should be our primary concern in our presentation.

The fulfilment of our voluntary obligations in the matter
of service to scholarship cannot be effected without preliminary exertion on our part. Such exertion involves the collection of data for understanding the inscription. The detailed examination and application of the various tests that we may carry out with all the preciseness and foresight at our command would help the exploration of the material to its highest capacity. Mere record of the results of our labour and analytical study is not likely to convince the scholars of their reliability and value. These results must, therefore, be accompanied by notes on the observations and considerations supporting them. However, to exceed the limitation placed by the subject-matter of the material itself is a digression to be avoided both in the interest of the material and the subject-matter of the digression. By such digression either the original matter or the digressed matter is thrown into the background. Such digressions are often due to the zeal displayed by the editors in extending the use of their articles to purposes other than those for which they were primarily designed. If, however, this zeal is directed towards the composition of an independent article, it would render a distinct service to scholarship.

The manner of the presentation of the actual text and translation with a view to make them useful to historiographers has already been discussed elsewhere. There are, however, certain points pertaining to both the introduction and the text, which require some notice here. There is a tendency among scholars to discuss in the introductions such matters which ought to accompany the texts in the form of notes or explanations. Notes, which form the critical apparatus for the text or translation, but having no direct connection with its evidence, should go with the text, as they prove very helpful for ready reference and thus ensure clarity of understanding. On the contrary, their inclusion in the introductions renders them liable to neglect, and consequently they lose their corrective value. The text and explanatory notes, when read together, facilitates clear understanding of the text, and the labour otherwise involved in revising the impression gathered by the first reading of the text is saved. Introductions are
sometimes full of details which divert the attention of the reader from the main subject to matters of subsidiary importance. Similarly, the identification of persons and places, except in disputable cases, should accompany the text. Such arrangement results in increased clarity and utility of the text.

In journalism, two main points are generally emphasized: (a) the whole theme of an article should be introduced in the first one or two sentences of the article, and (b) the climax should be reserved for the closing paragraph, care being taken to see that gradual interest is maintained throughout the article. Perhaps both these points are worth adopting in articles introducing inscriptive records. Any defined arrangement of the nature indicated above must offer greater utility and convenience to the reader especially because these introductions are generally used for 'reference' purposes. The want of method and uniform system in the treatment of historical material causes much waste of time and labour.

For a correct appreciation of the inscription, the scholars expect from the editor's introduction all available history of the inscription together with the story reconstructed on the strength of the inscriptive text and the information gathered on the spot. Thus the history of the inscription necessarily begins with its location, and the more detailed is the description of the location and the locality, the brighter is the perspective obtained, offering a very sound foundation for such a history. The accurate time sense of the researcher prepares a distinct background for visualizing the contemporary conditions and environments. Once this vision is obtained, the story of the persons and their deeds mentioned in the inscription becomes perfectly intelligible. The plain story as directly told by the inscription contains nothing of a disputable nature, except perhaps the omissions and deficiencies of matter. If the story is precise in its details and factual, it leaves hardly any ground for dispute. The accuracy and details of the evidence recorded in an inscription simplify the reconstruction of history for which neither imagination nor sentiment are reliable guides.
To understand correctly the message of an inscription in its true spirit and substance, a serious and critical study of all relevant material with all its bearings is essential. Local history and tradition generally afford elaborate details and information, but they are not always as pure and simple as they appear to be. Every detail, therefore, needs to be critically examined before it is given credence and made use of. Whatever be its exact nature, it assists investigation one way or the other. A record of this groundwork of details with the comments of the editor as regards its critical value is of particular interest to scholars as it gives them a hypothetical basis for their study. Their own knowledge may further discover some new grounds either for the rejection or acceptance of the inscriptive evidence.

The local history and tradition generally lay stress on the local importance of the inscription. The local people take pride in that portion of an inscription which tickles their sense of honour. Their stories regarding the relics of buildings or other structures are at best reliable in so far as the names of persons and places connected with them are concerned. As these stories are carried forward from generation to generation with increased inflation, they become sometimes misleading and inconsistent. This defect needs to be remedied by further investigation in other sources. As these stories are often lacking in time sense and the motives behind the actions or deeds told in them are frequently imaginary, it is necessary to probe their truth with special care. If the deeds are of provincial or national importance, the element of exaggeration in these stories is tempered by the relative historical accounts recorded in histories that may be current. In spite of all possible mixing up of genealogical pedigrees, important names connected with some important incidents or regime is remembered. The text of the inscription, however, is always clear and definite, and hence it enables us to reconstruct and envisage the contemporary local history connected with the inscription.

The event described in the inscription's self-explanatory and its details possess scientific clarity. It is therefore, a direct
evidence of a conclusive nature. It may be incomplete in itself or imperfectly worded, but the direct message it gives conveys a true picture of the beliefs of contemporary persons and the local public. Unless, therefore, any portion of the inscriptive text is blurred or lost, the event recorded is plain enough and requires no further efforts either for its emendation or completion.

The most controvertible matter in an introduction is the attempt to fix the value and use of the direct inscriptive evidence and to determine its possible influences and repercussions on the evidence already recorded. We have already considered at some length the value and application of such evidence to historical reconstruction. We are now concerned with the treatment to be given to this subject in an introduction. The notes on disputable identification of persons, and on events affected by the inscriptive evidence deserve to be treated in detail. The facts of history that may be supported by the inscriptive evidence should be next dealt with and those disproved should follow them. A complete documentation is necessary for scientific accuracy. Special discussion is also necessary when an inscriptive record disproves the facts already established on the strength of a first-rate contemporary source.

The conclusion of the introduction should record the importance of the find and its contribution to the existing knowledge. Such assessment of the research value of the find will, of course, involve interpretation of history. This interpretation is a very wide subject necessitating a detailed treatment of its principles and particularly that of the exceptions. Fortunately, in the inscriptive records, we have rare occasions, if any, of applying the principles of interpretation to our conclusions, as these records proclaim blunt facts. The intentions underlying them are obvious and contain hardly anything sentimental or prejudicial.
CONCLUSION

In any kind of research, the early stages are particularly marked by highly specialized efforts and sound intellectual achievements. The actual results obtained from such efforts, however, are not always commensurate with the labour and intellect devoted to them. They ultimately prove to be poor in substance and are by their very nature imperfect. These defects are due to the lack of adequate experience and insufficient understanding. In the absence of proper experience and understanding, it is difficult to determine the requirements and conditions of the scientific presentation and ultimate use of the material discovered. Persistent effort and practical experience gained in course of time develop a stage in research at which a systematization of these efforts in the form of a definite process becomes a possibility. Historical research in India has ere long reached this stage, and a process for the sifting of material is overdue. Such systematization will not only make the presentation of new historical material easy and scientifically sound, but will necessitate the revision of the material already published in the early stages of research, and will also facilitate the coordination of scholarly efforts. Until this revision is complete, the use of all the available material will not be effective and complete. An early evolution of such a process is a desideratum.

A textual examination of the Arabic and Persian sources of history has already received the best attention of eminent scholars and linguists. The principles of textual criticism appear to have been determined to some extent; but I am not certain whether experts in linguistics have tackled the problem of names, titles and honorific terms. If this problem yet remains uninvestigated, scholars will do well to recognize its pressing need at the moment and undertake its investigation with the least possible delay. Both these problems, as I have
already pointed out, are outside the sphere of my study. My sole intention in this book is, therefore, to place before all concerned the viewpoint of historiographers not conversant with these languages; and if I have correctly and properly placed this viewpoint without any bias and with some degree of clarity and precision, I shall have rendered some service to the cause of our national history by indicating some salient points which may help the final shaping of the process, necessary for the presentation and use of historical material.

The next stage of historical research on which attention of scholars will be mainly concentrated is that of the application and interpretation of evidence. Whether Indian history has attained this stage or not is still a matter of dispute among scholars of the scientific bent of mind. Many of these scholars still hold that this stage has not been reached because even a broader sketch of our national history is yet incomplete and imperfect. It is hoped, however, that with the present wide awakening in this country with regard to the reconstruction of our national history, this stage will soon be reached and a technique for the application and interpretation of evidence will be devised. Once this is accomplished, the reconstruction of a true and reliable national history will not be a very distant objective.
PART II

CHRONOLOGICAL TABLE
OF THE INSCRIPTIONS RECORDED IN THE
EPIGRAPHIA INDO-MOSLEMICA
—1907 to 1938—

No further justification for a chronological treatment is now necessary in this attempt to coordinate the historical material published in the Epigraphia Indo-Moslemica in view of its detailed consideration elsewhere in this book. If by way of explanation any further remarks are necessary, they are in the form of apology for my inability to adhere rigidly in the following Table to the principles enunciated in several chapters. The only excuse for this inability is my ignorance of the languages of the texts of the material.

I have aimed at providing all possible facilities to the readers for their arriving at a correct time sense, and in doing this only the clues found to exist in the translations of the texts of inscriptions have been relied upon without further scrutiny. Care has also been taken to narrow down the time-limits as far as possible in giving their correspondence in the Christian Era. Pillay's Chronological Tables and Modak’s Jvntri have been largely made use of in ascertaining this correspondence. Correspondence of days and dates, however, is regulated by the principles resolved upon in my discussion on the Muslim Eras.\(^1\) Any mistakes that may have crept in the reading of these dates or any errors in the calculations of chronograms in the original texts have been left untouched. The dates as given in the translations have been accepted. Of course, in a critical examination of the texts, further discrepan-

---

cies may be revealed, but this would require an expert examination of the texts by linguists.

Being a student of history proper, I have no intention of going beyond the province of my study. My summaries of the insessional texts as presented in their translations by the learned scholars are restricted to the historical aspects of the material. The summaries are composed exclusively of words from the translations of the texts themselves without disturbing even their original grammatical construction. Particular care has been taken to avoid the introduction of words foreign to the original translation. Words necessary to complete the subject-matter grammatically or idiomatically have been inserted, but they are enclosed into brackets to distinguish them from the original text. As I have already pointed out, the transliteration system is not what it ought to be. My inability to improve the varied transliterations adopted by scholars has compelled me to retain them in my summaries. Owing to all these factors, over which I had no control, the Chronological Table is also characterized by all consequential disadvantages. It was, however, considered safer to follow the scholars implicitly in their respective conclusions, rather than introduce my own system of transliteration for texts which I could not determine with confident judgment and discretion.

In recording reference to the original material, both the location of the tablet and the page number of the publication have been given: the former by quoting the places and locations of the tablets and the latter with the year of the biennial issue of *Epigraphia Indo-Moslemica* concerned. The name of the contributor is indicated by his initials, a key to which is given in the List of Contributors (Appendix A).

The references made by the contributors to other works dealing with the inscriptions edited by them have also been included in the Table.

To facilitate the use of this Table, the summaries of inscriptions are numbered serially. Indexes of places and persons have also been added for easy reference.
TABLE OF INSCRIPTIONS
RECORDED IN THE
EPIGRAPHIA INDO-MOSELICMA—1907-381.

482. H. Zī'LQĀ'DA (Satur : 5th January to Sun : 3rd February 1090 A.D.)—This well was built by .... Abū Jā'far Muḥammad, son of Abūl Jabbār, son of Muḥammad, native of Jurjān .......—Ins. from Hund, preserved in the Peshawar Museum; p. 1, 1921-2; MHQ. —(No. 1).

587 H. (Tues : 29th January 1191 to Fri : 17th January 1192 A.D.)—This fort was conquered and this Jāmi' Masjid built ... by ... Amīr-ul-Umrā Aibeg ...—Ins. in Quwwat ul Islām Mosque, Delhi; p. 13, 1911-2; JH. —(No. 2).

588 H. (Satur : 18th January 1192 to Mon : 6th January 1193 A.D.)—(During the reign of) .... Muḥammad Ibn Sām² ...—Ins. in the enclosure of Shāh Ni'matu'llah Shahīd, Hansi; p. 19, 1911-2; JH. —(No. 3).

592 H. (Wednes : 6th December 1195 to Satur : 23rd November, 1196 A.D.)—This building was undertaken by the .... order of .... Muḥammad Ibn Sām .... —Ins. in Quwwat ul Islām Mosque, Delhi; p. 14, 1911-2; JH. —(No. 4).

593 H. Zī'L-HIJJA 10 (Fri : 24th October 1197 A.D.)—This mosque was ordered to be built by .... 'Ali Ibn Isfandiyār .... —Ins. on the doorway of the Tomb of Shāh Ni'matu'llah Shahīd, Hansi Fort; p. 15, 1911-2; JH. —(No. 5).

595 H. JUMĀDI-II 21 (Tues : 20th April 1199 A.D.)—Built .... —Ins. on the central Mihrab of the Arhai din kā Jhūnpra Mosque, Ajmer; p. 15, 1911-2; JH. —(No. 6).

596 H. Zī'L-HIJJA (Tues : 12th September to Wednes : 11th October 1200 A.D.)—Under the supervision of Abū Bakr Ibn Aḥmad .... Khālu al Harāwi (Herat) .... —Ins. in the Arhai din kā Jhūnpra Mosque, Ajmer; p. 15, 1911-2; JH. —(No. 7).

1. In his letter No. F-6-10-43—E of 26th July 1943, Mr. John Sargent, M.A., C.I.E., Joint Secretary to the Government of India, Department of Education, Health and Lands, Simla, has very kindly granted the necessary permission to use the material published in the "Epigraphia Indo-Moslemica—1907-38" for this Table.

607 H. Ramajān (Wednes: 16th February to Thurs: 17th March 1211 A.D.)—This edifice was erected during the reign of Qutb’u-d-Dīn Aibeg. Ins. at the back of the pulpit of the Jāmī Masjid, Palwal, Gurgan District, Punjab; pp. 2-3, 1911-2; MMS: p. 20, ibid; JH.—(No. 8).

608 H. Jumādī-I (Tues: 11th October to Wednes: 9th November 1211 A.D.)—This building was erected during the reign of Shams-u’d-dunyā. Abūl Ma’alī Itutmīsh Al Qutbi. by the order of Amīr, the Commander in Chief Abūl Makārīm Sunqurtīgin Sunqur. Ins. over the central Mihrāb of the ‘Idgāh at Palwal, District Gurgan, Punjab; p. 3, 1911-2; MMS.—(No. 9).

620 H. (Sun: 4th February 1223 to Tues: 23rd January 1224 A.D.) Enter in peace safely Itutmīsh as-Sultānī. Ins. on the entrance to the Jāmī Masjid, Budaun; p. 22, 1911-2; JH.—(No. 10).

622 H. Zī’l-Qā’da I (Tues: 4th November 1225 A.D.)—The tomb of the veiled respectable lady was finished. Ins. in the enclosure of the Chār Minār, Hansi; p. 22, 1911-2; JH.—(No. 11).

623 H. Rabī’-II Middle (10 to 20) (Fri: 10th to Mon: 20th April 1226 A.D.)—This is the mosque built by Āhmād Ibn Muḥammad Usmandi. Ins. in the mosque of Bū ‘Alī Bahsh. Hansi; p. 22, 1911-2; JH.—(No. 12).

627 H. (Tues: 20th November 1229 to Fri: 8th November 1230 A.D.)—Itutmīsh, the Sultān; Ittikhar-ul-Umar; Farrukh the Sultānī. Ins. in Sayyid Wārā Mosque, Bilgrām; p. 23, 1911-2; JH.—(No. 13).

629 H. (Wednes: 29th October 1231 to Sun: 17th October 1932 A.D.)—This building was ordered to be erected by Itutmīsh, as-Sultān; a mausoleum for the king Abūl Fath Maḥmud. Ins. on the gateway of the Tomb of Sultān Ghārī, Malikpur; p. 24, 1911-2; JH.—(No. 14).

(630 to 633 H.: 1232 to 1235 A.D.)—The construction of this well was renewed in the days of Itutmīsh, as-Sultānī.

3. Qutb’u-d-Dīn Aibeg ascended the throne of Delhi in 602 H. (1206 A.D.); died in 607 H. (1210 A.D.).
4a. Abūl Fath Maḥmud was the eldest son of Itutmīsh; died in 626 H. (1228-29 A.D.).
during the turn of the governorship of the late Malik Qutlugh Khān Aibeg, in the months of the year six hundred and odd and thirty.

—Ins. in the Calcutta Museum; p. 25, 1911-2; JH. (Also p. 45, Vol. XI, A. S. J. by Cunningham; p. 72, P. A. S. B., 1874 by Blochmann.)

—(No. 15).

(607 to 633 H.: 1210 to 1236 A.D.)—The completion of this building was ordered by the King .... Itutmish, al-Qutbi .... -- Ins. over the doorway, Second Floor, Quṭb Minār; Delhi: p. 26, 1911-2; JH.

—(No. 16).

(607 to 633 H.: 1210 to 1236 A.D.)—Itutmish, the Sultān ....

—Ins. on a Mihrāb originally in Okhla, now in the Delhi Museum; p. 29, 1911-2; JH.

—(No. 17).

(607 to 633 H.: 1210 to 1236 A.D.)—Itutmish, as-Sultānī ....

—Ins. on the lower belt, Northern Minaret, Arhai din kā Jhōnpṛa, Ajmer; p. 29, 1911-2; JH.

—(No. 18).

(607 to 633 H.) Rabi’-II 20 (1210 to 1236 A.D.)—This building was ordered by .... Itutmish, as-Sultānī, ... -- Ins. on the central arch, Arhai din kā Jhōnpṛa, Ajmer; p. 30, 1911-2; JH.

—(No. 19).

633 H. Rajab Middle Monday (13 or 20) (23rd or 30th March 1236 A.D.)—This is the grave of .... Shaikh Arjun of Damo and Akhsi .... He died on Monday in the middle of the silent month of God in the year 633 .... -- Ins. on the Tomb of Bābā Arjun Shāh, Petlād, Baroda State; p. 16, 1915-6; GY.

—(No. 20).

638 H. Rajab 4 (Satur: 19th January 1241 A.D.)—Muḥammad bin ‘Ali bin ‘Uthman entitled Niẓāmu’d-Din .... dehise occurred on the 4th of .... Rajab .... in .... 638 .... -- Ins. on a Tomb, Hansi; p. 16, 1913-4; GY.

—(No. 21).

640 H. Muḥarram (Tues: 1st to Wednes*: 30th July 1242 A.D.)—Mubārak,5 the Treasurer .... ordered to erect this building during the reign of .... Tughrīl6 .... -- Ins. on the Baṭi Dargāh, Bihar; p. 17, 1913-4; GY.

—(No. 22).

643 H. Shawwāl Middle (10 to 20) (Wednes: 28th February to Satur: 10th March 1246 A.D.)—In the reign .... Mas’ūd Shāh,7 .... Malik ... Sunqur-i-Sūfī, as-Sultānī ... ordered the erection of this building .... -- Ins. in a mosque at Hansi; p. 18, 1913-4; GY. (Also, p. 136, Vol. II, Epigraphia Indica by Dr. Paul Horn). —(No. 23).

5. Mubārak Al-Khāzin.
6. ‘Izzu’d-Din Tughrīl Tughān Khān.
7. ‘Alā’u-d-Din Mas’ūd.
643 H. Zil-Hijja 9 Friday (27th April 1246 A.D.)—This is the tomb of ... Sadr, the great Shaikh, Salāḥu'd-Din Abu'l-Maḥmūd al-Ḥusain b. Muhammad al-Ḥasan b. Muhammad b. al-Ḥusain Abū-Bakri 'Ali az-Zakarī al-Balkhi ... He lived ninety-eight years and died on Friday, the 9th of Zil-hijja ... in 643 ........ —Ins. on the Tomb of Shaikh Salāḥu'd-Din, Kaithal, Punjab; p. 19, 1913-4; GY. —(No. 24).

647 H. Muḥarram 1 (Fri: 16th April 1249 A.D.)—Ilutmish, as-Sulṭān, ... gave orders to build this mosque, and it was renovated during the reign of ... Maḥmūd Shāh bin as-Sulṭān ... during the governorship of ... Malik ... Mas'ūd Shāh ... —Ins. in a mosque at Gangarampur, Malda; p. 22, 1913-4; GY. (Also Vol. XV, Reports of the Archaeological Survey of India by Cunningham.) —(No. 25).

652 H. Rajab 10 (Wednes: 26th August 1254 A.D.)—This building (was erected) ... during the reign of ... Maḥmud b. as-Sulṭān ... by order of ... Balban ash-Shamsi during ... his government ... —Ins. on the Koil Minaret, Aligarh; p. 23, 1913-4; GY. —(No. 26).

(644 to 664 H.: 1246 to 1266 A.D.)—Abu'l (Faṭḥ) Maḥmūd, the son of ... Ilutmish, the Sulṭān ... Nāṣiru'd-dunyā ... —Ins. on an 'Idgāh, Ḥansi; p. 28, 1911-2; JH. —(No. 27).

665 H. (Satur: 2nd October 1266 to Wednes: 21st September 1267 A.D.)—Tatār Khān ... to build the tomb (during ... the year 665) of Sulṭān Shāh ... (Died) on the night of Sunday, the 18th of Jumāda I, 663 (?)—Ins. in Barahdārī, Bihar; p. 25, 1913-4; GY. (Also, p. 247, Vol. XLII, J. A. S. B. by Blochmann.)—(No. 28).

665 H. (Satur: 2nd October 1266 to Wednes: 21st September 1267 A.D.)—The founder of this ... mosque ... Sulṭān Ghiyāthu'd-dunyā wa'd-Din ... —Ins. in the Jāmī' Masjid, Jalālī, Aligarh; p. 26, 1913-4; GY. (Also, p. 571 of Statistical, Descriptive and Historical Account of the North Western Provinces by Mr. E. T. Atkinson and Zafar Ḥasan's Note in the Annual Report. Part II,

10. Muhammad Arsalan Tatār Khān, son of Arsalan Khān Sanjar.
11. Sunday, 18 Jumādī'ī-I, 663 H. = 8th March 1265 A.D.
TABLE OF INSCRIPTIONS

1914-15 of the Director General of Archæological Survey of India.)
—(No. 29).

669 H. RAMAJAN 1 (Monday 13th April 1271 A.D.)—The clearance of the well ... built one hundred and fifty years ago, and ... during the régime of Muḥammad Ḥaji was choked and filled up with stones ... commenced on the 1st of ... Ramajān in ... 669 ... and was completed by the end of the same month. During the reign of ... Ghiyāthu'ḍ-Dunyā wa'ḍ-Din ... and during the régime of ... Nuṣrat Khān, the fief-holder of Bayana, through ... Ibrāhīm Abū Bakr Naūshīrwān ... —Ins. in a well at Kamān, Bharatpur State; p. 6, 1937-8; GY.
—(No. 30).

674 H. RAMAJAN 10 (Thurs : 27th February 1276 A.D.)—This mosque was built in the time of the government of ... Ghiyāthu'ḍ-Dunyā wa'ḍ-Din ... Balban, the Sultān ... by Muḥammad b. Aibek Shamsi Ajami ... —Ins. in the Jāmi' Masjid at Farrukh Nagar, Gurgan District; p. 27, 1913-4; GY. (Also, the Journal of the Punjab Historical Society, Vol. IV, No. 2, pp. 112-16)—(No. 31).

676 H. RAJAB 12 (Thurs : 9th December 1277 A.D.)—During the government of ... Balban, the Sultān ... Qerābek b. Aibek, the feudatory of Sonepat, renewed this building ... —Ins. in the mosque attached to the Tomb of Imām Naṣīr, Sonepat, Punjab; p. 28, 1913-4; GY. (Also, p. 138, Vol. II, Epigraphia Indica, by Blochmann; and p. 94, P. A. S. B., 1873, by Dr. Paul Horn.)—(No. 32).

(680 H. RABI'II 25) Vikram Sam : 1337 Shrāvan Vadya 13 Wednesday (13th August 1281 A.D.) (Sanskrit) — This land of Hirayānaka was first ruled by the Tomaraś (Tunvārs), then by the Chauhānās; now it is governed by Ṣaka (Moslem) Princes. In the beginning Shahābu'd-Din (became king); after him Qutbu'd-Din the guardian of the earth, (then) was Shamsu'd-Din (and then) Fīroz Shāh, ... Hereafter (came) Jalālu'd-Din, then was born prince Mu'izzu'd-Din, (then) the illustrious 'Alāu'd-Din the excellent king, (and then) Nasiru'd-Din, ... Amir Ghiyāsu'd-Din reigns as ... king ... When he sets out on the conquest of the world, the Gaudās (Bengalis) forsake their boasting, the Andhrās take to their caves out of fear, the Keralās forsake their sports, the Karnātās also take refuge in their glens, the Mahārāśtriṇaśa vanish, the Gurjarās lose their strength, and the Lātās become like Kīrātās ... In the town of Delhi, renowned under the name of Yoginipūrā there lived a righteous and wealthy citizen (?) of the name of Uddhāra ... Uchhapuri (Uch) ... In that town lived his father Haripāla; his father was Yasarāja, Dullahāra was his father, and Kipu was his father. Thus is his
paternal pedigree, Udhāra’s mother was Chandi, Prithu’s daughter; the father of Prithu was Harischandra. His father was Utsāhana, the son of Sahadev, and he was the son of Tola. The father of Tola was Vyagrahāra, the son of Śīma and grandson of Gaura. He had three wives... Jajāla the eldest spouse with Rājasri Ratnadevi. Her (Jajāla’s) son was Harirāja... and his two younger brothers, Thirarāja and Jaitra appear together with their sister Virāda... (Rājasri) had... daughter Dhanavati and afterwards two sons Gunarāja and Bhupati. Ratnadevi had... Haradeva known as Natha and a daughter. Another son Uttamāraja and a daughter Śādali. Here to the east of the village Palamba (Palam) and to the west of Kusumbhapurā that wise man made a well... This... eulogy was made by Pandit Yogisvara on the well of Udhāra... In this year of Vikramāditya... 1337, the month of Shravana, the 13th day of the dark fortnight on Wednesday.

reign of Muhammad Shāh, all the infidels became subject to the Muslims. During the reign of the ... king of the Deccan, Muḥammad ('Ādil) Shāh, appeared Afṣal, the idol-breaker ... —Ins. on the Tomb of Jahāngīr's mother, Raḥmatpur, Satara District; pp. 58-9, 1933-4-Sup.; MN.

1062 H. (Thurs: 4th December 1651 to Sun: 21st November 1652 A.D.) (Persian):—That great Amīr, Malik, Shaikh 'Ali, who was the deputy of Dabul by the command of the King, when the people saw that he was a defender of the faith, they represented to him that, from the old, whoever did not leave a natural son, whether he be a Hindu or one who takes refuge in Faith (Muslim), after his death, whatever was left of his property, whether riches, wealth, garments or caps, the officers of Dabul used to confiscate it. By this evil practice the world had been ruined. The request of the people was accepted by him as he had great regard for them. To his Sarnaubat named 'Abdu'r Rasūl he issued the order that by the command of the King both Hindus and Muslims are exempt, without doubt. This is the charity of the King ... (Marathi):—In the ... port Mustafabād in Dābhelāvati the property of person whether Hindu or Musalmān who dies without an issue should not be confiscated ... The Mokāshī, the Thānādār, the Ināmdār should not confiscate it ... the person who dies without leaving a son should be pardoned ... —Ins. on a tablet opposite Jāmiʿ Masjid, Dabhol, District Ratnagiri; pp. 10-2, 1933-4-Sup.; MN.

1077 H. (Sun: 24th June 1666 to Thurs: 13th June 1667 A.D.) —This great bastion, which is called the Ḥaidari bastion, in the fort of the city of Muhammednagar, has been built for the reason that during the year 106667 Sultān Aurangzeb, son of Shāh Jahān, accompanied by a large army, besieged the fort. Among the nobles of the king was one, Mir Mīrān,68 who had promised to conquer the fort and make it over to the King within three days ... estab-
lished ... and carried the intrenchments and mines to the ditch (of the fort) .... As this place was a small bastion an order .... of .... 'Abdu'llāh Quṭb Shāh .... to the Wazir of Wazirs .... Commander-in-Chief .... Musā Khān, had the honour of issuing to this effect, that he himself be at the spot and occupy himself in repelling the enemy. Thereupon the .... Khān with all caution baffled the enemy day and night. And by the Divine decree a gun shot struck the body of Mīr-i-Mīrān in such a manner that he expired in that very intrenchment (whence he was bombarding the fort). Three days after his death peace was concluded. When the siege had been raised the supreme orders were issued to the

— In the year 1066 A.D. the Christian Calendar is 1665. In the year 1067 A.D. the Christian Calendar is 1666. In the year 1068 A.D. the Christian Calendar is 1667.

APPENDIX C

I—INDEX TO PLACES

[N. B.—The figures refer to the serial number of inscriptions given at the end of each summary.]

Adhichini : 166, 526.
Adilābād : 279.
Adoni Fort : 458, 510.
Ahasanābād : 255, 279.
Ahīwant Fort : 379, 382.
Ahmedabad : 120, 121.
Ahmednagar : 184, 217, 218, 221,
227, 241, 253, 257, 270, 280,
293, 446, 489, 563.
(District) 88, 236, 472, 486,
504, 545, 546, 547, 551, 555,
556, 573.
Ahmednagar Darwāzā : 540.
Ajanthā Chāt : 373.
Ajmer : 6, 7, 18, 19, 345.
Akar : 328.
Akhand Darwāzā : 80.
Akhsi : 20.
Akola : 506, 507, 516, 521, 561,
574, 575.
Alāī Darwāzā : 54.
'Alamgīr Masjid : 413, 586.
Aliqar : 26, 29, 222.
Allahabad : 71, 147.
Ambār Khānā : 390.
Ambiyā Wāli Masjid : 60.
Amrohā : 39.
Ānad : 373, 517.
Anchālāgarh Fort : 379, 382.
Anjārī or Indrāi Fort : 378, 379,
382.
Antī : 185.
Antur Fort : 293, 334, 346, 366.
Arbā Masjid : 62.
Arbūn kī Masjid : 330, 567.
Ardaštān : 349.
Arhai din kā Jhōnpā : 18, 19.
Āsadgarh : 507, 521.
Āsawā Khurd : 71, 147.
Āshrafi Mahāl : 318.
Āshī : 174.
Ashtur : 116, 282, 331, 333, 436,
569.
Asir or Āsirgarh : 274, 275, 310,
311, 313, 371, 411, 417.
Atapur : 51, 455, 464.
Atish Bār Toph : 467.
Aurangabad : 510, 511.
(District) 69, 293, 334, 346,
366.
Āwand : 356.
Azhdāh Pālkār Toph : 457.
Bada Bāgh : 477, 480, 484.
Badakhshān : 398.
Bandra Shāh : 97.

BOOKS

by

Mr. V. S. BENDREY

1. SĀDHANA-CHIKITSA : (Marathi) : Rs. 3-8-0.

Dr. Sureshra Nath Sen, M.A., D.Sc.: ....it will be of immense use to students of history....a good hand-book on historical methods....

Mr. H. G. Rawlinson, M.A., C.I.E., I.E.S.: ....should be studied by every aspirant who wishes to take the M.A. in history....an admirable work....

Mr. C. A. Kincaid, C.I.E., I.C.S.: ....enormously impressed of the volume of its learning and industry....monumental work....should prove of the most valuable help to future students of Maratha History....

Mr. F. R. B. Lory, M.A., C.I.E., I.E.S., D.P.I.: ....most creditable....

Prof. S. V. Puntambekar, M.A., Bar-at-Law (Benares): ....I am using it for the M.A. classes in Maratha History....

Journal of the Bombay Historical Society, Bombay: ....dealt with his subject with such absolute dispassionateness as will do credit to a Langlois or Siegnoyes....all....pitfalls are wonderfully anticipated and solved with surprising ease....

2. RĀJĀRAMA-CHARITAM or Chhatrapati Rajaram's Journey to Jinni: (Sanskrit text with English Introduction) : Rs. 1-8.

Sir Jadunath Sarkar, Kt., C.I.E., I.E.S.: ....corrects some minute points....where previous writers were in the dark....it is service to history....

Rev. Father H. Heaton, S.J.: ....extremely useful not only for the historians of Maharashtra but for all students of South Indian History....edited with great care and scholarship....

The Bombay Chronicle: ....Mr. Bendrey whose knowledge of this period gained by patient research from all contemporary Foreign and Indian records is unrivalled....

3. TARIKH-I-ILĀHI: (English) Re. 1. Akbar's Divine Era fully explained and tables of correspondence given.

Prof. C. S. Srinivasacharier, M.A., Annamalai University: ....is informing of many obscure points of early Moghal Chronology and is useful to students of history....

Timess of India: ....should prove of great use....for it finally sets at rest a knotty....problem so long....baffling all attempts at solution....

The Hindu, Madras: ....an important contribution....we heartily endorse the opinion of Shams-ul-Ulema Dr. Sir Jiwanji J. Modi 'that the paper will be of great use to students of History....'

Modern Review, Calcutta: ....has done a service to history by publishing his learned paper....Mr. Bendrey's study is a distinct advance on previous efforts....

Journal of the Annamalai University: ....a very useful guide for students of Moghal Chronology and Numismatics....

4. QUTBSHĀHI OF GOLCONDAH: (Marathi-English) : Rs. 4.

The Hindu, Madras: ....a scholarly and competent sketch of the History of the Kutbshahi dynasty of Golconah prefaces three interesting documents, which contain new materials....Mr. V. S. Bendrey....is known in the widening circle of....history as a conscientious and painstaking scholar, with a passion for meticulous accuracy in details....The work....first part is Mr. Bendrey's own original contribution....gives an up-to-date summary of the History of the Golconda Kingdom. It is written with scholarly care and thoroughness....
The Times of India: ... A pioneer attempt. ... Mr. Bendre modestly disclaims any more ambitious appellation than a mere chronology, but it represents perhaps one of the first attempts to trace, on a fairly elaborate scale, the rise and fall of the Qutbshahi of Golconda. It is written with scholarly care and thoroughness.

United India and Indian States, New Delhi: ... will add to Mr. Bendre's reputation as a careful and painstaking student of history with a passion for accuracy especially in the matter of chronology will be found indispensable.

The Maharrat, Poona: ... specializes in the research of Maratha History. ... methods are rather thorough and going on more exact, perfectly authorized statement on every point.

5. DANDANITIPRAKARANAM or Criminal Jurisprudence— XVII Century: (Sanskrit text with Introduction in English).
   Rs. 3.

The Hon. Mr. J. A. Madan, C.I.E., I.C.S. ... laboriously and carefully compiled... both interesting and instructive.

Prof. S. R. Sharma: ... rendered a distinct service to students of the Shivastahi period... a very valuable treatise... bears ample testimony to his critical acumen, scientific approach and great erudition.

Prof. S. V. Puntambekar (Brahms): ... Mr. Bendre shows a deep insight into the currents of the Deccan history... Shivaji's work in this aspect has no been fully dealt with before.

Annals of the Bhandarkar Oriental Research Institute, Poona: ... Mr. Bendre has tried to maintain this element of objectivity in all his writings... hence they are useful to the students of historical research... His edition... with its masterly critical introduction fully illustrates my remarks about Mr Bendre's methodical studies... painstaking and scholarly edition.

The Indian Historical Quarterly: ... satisfactory compilation... We recommend the volume to all students of the Criminal Law of Hindu India.

The Hindu, Madras: ... valuable treatise on Indian Penology... contributes very interesting and scholarly introductory matter... regarding the period of social, political and religious renaissance in the Maharashtra ...

The Trivorni: ... Important as showing the changing values of custom and institutions with the progress of the time.

6. MARATHI SHORTHAND: Rs. 2-8.

7. GUJARATI SHORTHAND: Rs. 2-8.

8. STENOGRAPHY FOR INDIA: As. 8.

Ready for
